PREVENT PIPE CORROSION

PIPE DECOR's industrial-grade black pipes and fittings are coated with a light oil to prevent rusting. For best results, clean and seal your kits before assembly to ensure longevity.

CLEAN & SEAL KIT

1. Pour moderate amount of degreaser onto towel.
2. Wipe on fittings or pipes to remove oil.
3. Repeat as necessary until no residue remains.
4. Dry all items fully.
5. Pour sealer into a container such as a plastic cup.
6. Using foam brush, apply sealer to fittings or pipes. Coat thoroughly.
7. Allow at least 10 minutes to dry. Multiple coats may be necessary.
8. Assemble the kit once all pieces are completely dry.

PART	DESCRIPTION	QTY
A	DEGREASER	1
B	SEALER	1
C	GLOVES	2 PAIRS
