

FURNITURE COVERS

1. Before you fit your new cover, please check that no damage has occurred in transit which could result in leakage.
2. You must always try to arrange the cover so that water runs off and does not collect in pools, particularly over sewn seams. You can do this by putting something under the cover in the centre to create a tent effect so that water runs off the cover.
3. Fit the cover and secure it on your furniture so it does not chafe on sharp points or edges.
4. These covers are designed to help protect your furniture from rain, dirt, and UV rays.
5. Cushions should never be left under the cover for any length of time as they may get damaged by condensation forming under the cover. Ideally, cushions should be stored away in a dry environment like in a shed or garage.
6. Although these covers are designed to help protect your furniture, we cannot guarantee this against extreme weather conditions.
7. We recommend that you check your cover on a regular basis to make sure no damage has occurred in severe weather conditions.

Condensation forms due to temperature changes which is sometimes mistaken for leakage. Our deluxe breathable fabric helps release condensation trapped underneath the covers, however, we do recommend airing the covers off every so often.

GARDEN FURNITURE CUSHIONS AND CUSHION COVERS

Please note, cushions should never be left under the cover for any length of time as they may get damaged by condensation forming under the cover. Ideally, cushions should be stored away in a dry environment like a shed or garage.
