Naturally we care

our philosophy

“Mother Nature is our muse: she guides us in all our choices.
In Diusapet, naturally we care”

This is the company philosophy of Diusapet which dates back to 1901, the year of the creation of its first line of natural products aimed to the care and the wellness of pets.

Over the years the company has evolved but the philosophy has always been the same, shaping both the creation of all the new lines of products and our production techniques in a unique and inimitable way.

In Diusapet our ingredients are not only carefully selected but they are also always respected in each step of our production process.

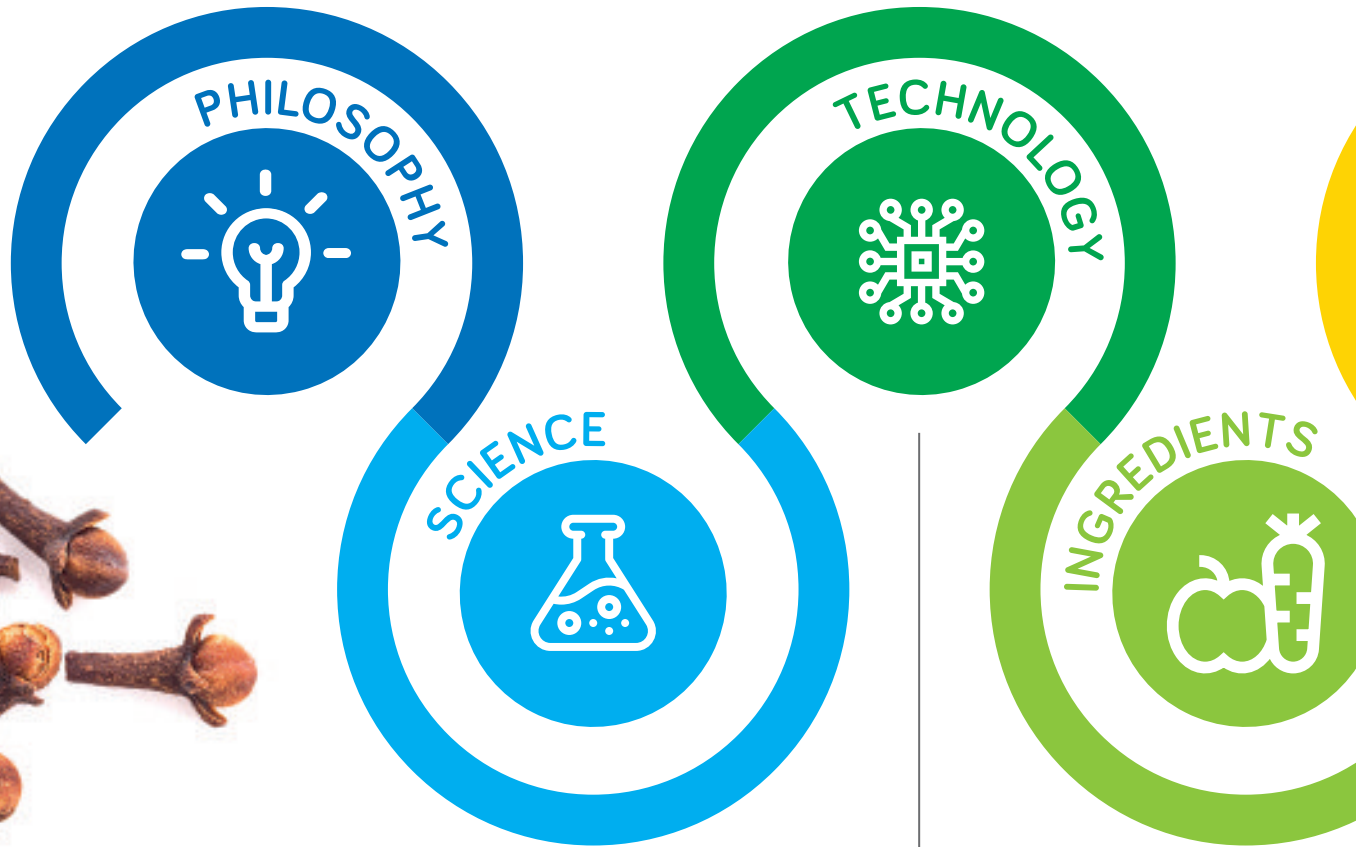

In particular the steam cooking procedure is performed in a very gentle way in order to preserve the nutritional value of the raw materials.
All this is made possible thanks to a Scientific Team able to transform raw materials and ingredients into petfood of excellent quality following the same highest production standards as the ones used for human food (ISO 9001).

**For 120 years Mother Nature has guided all our actions:
this is our DNA and this is why
“In Diusapet, naturally we care”**

how we work

The process that we follow is divided into 8 phases. It is a path in which every element is fundamental and essential to reach our aim: the wellbeing of our pets.

Science&Technology

From the study of the formulas to the creation of the products we operate based on a strict scientific nutritional approach, which is obtained thanks to the cooperation of our internal scientific team with nutritionists, researchers of universities and institutions. We employ the best extruder on the market (by Wenger USA) maximizing its efficacy thanks to a steam cooking process which respects the integrity of the valuable ingredients that we choose.

Steam Cooked

Health, wellness and sustainability

Thanks to our approach, we develop innovative nutritional systems, which are able to satisfy the needs of our pets at 360°.

Not only our company philosophy leads us to be naturally sustainable but we also choose research methods fully respectful of the dignity of our pets. The production is 100% made in Italy and the ingredients that we use are mainly of local production.

Ingredients and phytonutrients

The analysis and the accurate selection of the protein sources, fats and carbohydrates grant us the possibility to evaluate their freshness, integrity and nutritional value: in this way we can surely define their specific molecular composition and therefore their digestibility.

neobreeder cat

The Neobreeder products are dedicated to the feline breeders and they are developed in 2 lines with different nutritional characteristics and philosophies.
