

How to Use Your Ozone Generator for Fire Restoration

1. To begin, remove all burnt and charred materials from the home
2. The A7K is the best resource for removing smoke odors
3. This process will take a couple of days to complete
4. First, identify the room with the worst smoke odor
5. Next, place the unit in the middle of the room and turn on both plates
6. Have the fan set on high with a 4-hour timer and have the timer repeat every hour to maximize the amount of ozone in the room
 - Note: An oscillating fan would be beneficial to help move the ozone throughout the whole room
7. Run the unit for 1 day or 1/2 a day before moving on to the next room
8. Continue to repeat this process until all smoke smells are oxidized

Please Note: Be sure to only use your ozone generator in an unoccupied area. Our units produce high amounts of ozone. It is not safe to run the unit in an occupied area for more than 1 minutes. Be sure to remove any valuable items, pets and/or plants before you use the ozone generator. Do not breathe in ozone directly.
