

How to Use Ozone for Furniture Treatment

1. To start, you will need an ozone generator and a tarp
2. Once you have decided which item to ozonate first, you will need to take the tarp and drape it over the item (ex: couch)
3. Lay something to help hold down the tarp on the sides which will help hold in the ozone
4. Then, take the ozone generator and place the exhaust side under the tarp making sure the air vents aren't covered and are able to pull in fresh air
5. You will then need to turn on your unit with both plates running, with the fan on high, and with a 30-minute run cycle
6. Exit the house at this point or have this set up in a garage
7. Once the cycle is complete, wait 30 minutes to 1 hour for the ozone to dissipate, then you can enter the area and decide if another treatment is needed

Please Note: Be sure to only use your ozone generator in an unoccupied area. Our units produce high amounts of ozone. It is not safe to run the unit in an occupied area for more than 1 minute. Be sure to remove any valuable items, pets and/or plants before you use the ozone generator. Do not breathe in ozone directly.
