

DDA Compliant Parking Bar

AB-DBA-900

The AB-DBA-900 Boom Barrier is an ideal system for application at the entrance and exit of car parks and secure areas. Available in either galvanised or powder coated steel, the barrier also comes with optional LED illumination, making it operational across all hours of the day.

Australian Bollards also offers the AB-MGL Magnetic Lock and Post, a highly practical solution working to secure access control systems into a stand, protecting the barrier arm against strong forces.

- This barrier is a DDA compliant system featuring a warning safety beacon lighting and siren, making it easily visible at night.
- The barrier appears red when closed/access denied and green when open.
- The warning safety beacon lighting can stop accidents from occurring, and potentially save thousands of dollars in damages.
- It also features a very loud warning siren as the barrier moves both up and down, alerting those around the barrier that it is currently in use.
