

Handling System

**FLOW**

## Handling System

# FLOW

From the most sophisticated antropomorphic robots in the warehouses of the great distribution giants, to the basic house hardware, handling equipments are helping nowadays to creat efficiency and cost effective operations. These handling systems have contributed to make factories more productive and efficient too.

**Vitap is glad to present a new department dedicated to automation which is interconnected to the fleet of compact CNC working centers of K2 2.0 and Acoustic series, allowing the creation of productive cells. Vitap philosophy aims to evolve, together her customers, from stand alone working centers to a self feeding and stacking working cell thanks to a tailored automation system.**

The new **FLOW** handling system has been thought for high and flexible productions. Specially designed to load and unload throughfeed longitudinal working centers. The advantage of a compact (also as an investment) handling system like **FLOW** is the capacity to constantly feed the machine without any operator except for feeding and taking out the stacks to be worked and the already worked stacks. One operator can easily manage 2 or 3 **FLOW** systems with a large production output yet very flexible.

### Example 1 kitchen base unit side gable

Pieces per minute	4 pcs
Pieces per stack circa	70 pcs
Stacks	2
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	2.400 pcs

PANEL DIMENSIONS	
min length =	400
Max length =	1.500
min width =	300
Max width =	1.200

### Example 2 top of a base unit with minifix

Pieces per minute	2 pcs
Pieces per stack circa	70 pcs
Stacks	4
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	1.200 pcs

### PANEL DIMENSIONS

min length =	400
Max length =	1.500
min width =	300
Max width =	700

### Example 3 top of a base unit door

Pieces per minute	2 pcs
Pieces per stack circa	70 pcs
Stacks	4
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	1.200 pcs

### PANEL DIMENSIONS

min length =	400
Max length =	1.500
min width =	300
Max width =	700

# FLOW BATCH SIZE 1

## Automation K2 2.0

### FLOW BATCH SIZE 1 Example 4 batch size 1 kitchen unit

Pieces per minute	3 pcs
Pieces per stack circa	70 pcs
Stacks	4
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	1.800 pcs
Complete cabinets (4 pieces)	400/450 pcs

#### PANEL DIMENSIONS

min length =	400
Max length =	2.400
min width =	300
Max width =	700

PRODUCTIVITY FIGURES ARE TO BE INTENDED ROUGHLY ± 20%

\* depending to the dimension of the panel

## 

PRODUCTIVITY FIGURES ARE TO BE INTENDED ROUGHLY ± 20%

### 

#### Example 5 with special stacker

Pieces with 2000 holes	0,5 pcs
Pieces per minute	0,5 pcs
Pieces per stack circa	70 pcs
Stacks	4
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	300 pcs

#### POINT ACOUSTIC with **FLOW HANDLING**

Average selling price per m <sup>2</sup>	€ 40
Average cost per m <sup>2</sup>	€ 10
Mark up per m <sup>2</sup>	€ 30
Productivity per day	300 pcs
Mark up per day	€ 9.000

So you can pay back the entire plant (ROI) in about 20 working days.

\* depending to the dimension of the panel

#### PANEL DIMENSIONS

min length =	400
Max length =	2.400
min width =	300
Max width =	700

### Example 6 piece with big hole in center

Pieces per minute	1,4 pcs
Pieces per stack circa	70 pcs
Stacks	2 pcs
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	840 pcs

PANEL DIMENSIONS	
min length =	400
Max length =	1.500
min width =	300
Max width =	1.200

### Example 7 side of a library

Pieces per minute	0,7 pcs
Pieces per stack circa	70 pcs
Stacks	2
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	420 pcs

PRODUCTIVITY FIGURES ARE TO BE INTENDED ROUGHLY ± 20%

\* depending to the dimension of the panel

PANEL DIMENSIONS	
min length =	400
Max length =	2.400
min width =	300
Max width =	1.200

PRODUCTIVITY FIGURES ARE TO BE INTENDED ROUGHLY ± 20%

### Example 8 side of a library

Pieces per minute	0,7 pcs
Pieces per stack circa	70 pcs
Stacks	2
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	420 pcs

\* depending to the dimension of the panel

### PANEL DIMENSIONS

- min length = 400
- Max length = 2.400
- min width = 300
- Max width = 1.200

### FLOW 4L

#### Example 9 long door

Pieces per minute	0,7 pcs
Pieces per stack circa	70 pcs
Stacks	4
Working time including lunch time and 1 extra hour without operator	10 hours
In minutes	600 minutes
Total out put	420 pcs

#### PANEL DIMENSIONS

min length =	400
Max length =	2.400
min width =	300
Max width =	700

PRODUCTIVITY FIGURES ARE TO BE INTENDED ROUGHLY ± 20%

\* depending to the dimension of the panel
