

### Mounting instructions

**Wolfman Enduro Dry, Enduro Ultra-Lite, E-12, and Day Tripper Series Saddle Bags. Including our “Tension-O-Matic” rear mounting system. pat.pend.**

**\*\*The Enduro Dry, Enduro Ultra-Lite, E-12, and Day Tripper Saddle Bags all utilize the same mounting system, thus mounting to the motorcycle is the same.**

**\*READ THOROUGHLY BEFORE MOUNTING BAGS TO MOTORCYCLE**

\*Helpful hint: Stuff each bag with a sleeping bag or blanket to give it body.

\*For best results take a test ride before putting your Enduro Dry, Enduro Ultra-Lite, E-12, and Day Tripper Series Saddle Bags to use.

\*Mounting is the same for both sides.

Pictured is a properly mounted pair of Enduro Series Saddle Bags. FIG1

FIG1

Front mounting straps

Step-1

Place the Enduro Series Saddle Bags over the seat as shown.

Place the rear seat strap on the rear fender just past the end of the seat. FIG2

Adjust the straps between the bags so the top seam of each bag is equal to the top of the seat. FIG2

FIG2

Pictured is a side view of the Tension-O-Matic rear mounting system. FIG3

FIG3

Step-2

Spread the gutter hooks of the Tension-O-Matic mounting across the rear fender so the gutter hooks catch the bottom lip on each side of the rear fender. FIG4

FIG4

Step-3

Pull each Tension-O-Matic strap away from the rear fender in the direction of the arrows to tension the straps.

FIG5

Step-4

Tighten the bags to the Tension-O-Matic; pull the straps on both sides in the direction of the arrows. FIG6

FIG6

Step-5

Thread the front mounting straps on each bag around the sub frame side tubes, below the side panels. Thread the webbing behind the sub frame from the bottom and out the top. On the Exhaust side **be very careful**. (Yes, the webbing can be close to the exhaust header, the pipe can be very hot.) We have designed the front straps so they can be replaced if they get melted. FIG10

#### Step-6

Once all the straps are mounted the Enduro Series Saddle Bags should look like. FIG1

**\*\*Tighten all straps snug.**

#### Helpful hints:

During a ride check the straps tension every so often.

Put most of your heavy items on the non-exhaust side. (This is to make sure the bag does not flex the side panel onto the exhaust pipe.)

-The seat straps, front mount straps and Tension-O-Matic webbing straps are made extra long. You can cut to length, leave about 4" of tail and sear edge with a lighter. If you make a mistake, no worries, they are replaceable.

-Use the "V" compression straps on the E-12 and Day Tripper Saddle Bags to secure the contents.

-Use the Top and Side compression straps on the Enduro Dry and Enduro Ultra-Lite Saddle Bags to secure the contents.

-Before riding, do yourself a favor and make a dry run with the bags on.

**\*\*Make sure the straps are tight and snug.**

-If these instructions do not make sense, no worries, give us a call at 800/535-8131, or [info@wolfmanluggage.com](mailto:info@wolfmanluggage.com), We are here to help.

Enjoy, Wolfman
