Intelligent Design

Compact low profile design suitable for vertical or horizontal mounting.

Easy Installation

A fitted IP55 terminal box allows the fan to be positioned conveniently to incoming electrical inputs.

Designed For Efficiency

Aerofoil section, sickle shaped blades, with serrated trailing edges and winglets based on bionic insights.

Corrosion Resistance

Specially treated against corrosion, powder coated with polyester epoxy paint in pastel beige (RAL 7032).

Controllability

A range of control options are available to reduce fan speeds to desired performance needs.

Warranty

Each SPA has a 12 month warranty.

Construction

Constructed from mild steel and suitably treated to ensure full corrosion protection. Guards are powder coated polyester epoxy paint finish in black (RAL 9005). Fan plates are powder coated polyester epoxy paint finish in pastel beige.

Motor

Motors are highly efficient, lightweight external rotor motors, insulated to Class F complete with integral thermal overload protection. Sizes 250-350 are weatherproofed to IP44. Sizes 400-710 are weatherproofed to IP54. All fans are suitable for use with a speed controller.

Impeller

The Ziehl-Abegg FE2owlet impeller has a unique serrated trailing edge which provides optimised flow and improved acoustics. The Aerofoil blades, complete with winglets, enable increased impeller efficiency.

TRANSFORMER CONTROLLER

Accessories

- IP40 enclosure
- Five speed stepped control
- Illuminated on/off switch (single phase units only)
- Fitted Motor Protection type D MCB (single phase units only)
- Suitable for operating temperatures up to 40°C
- Ideal for environments where noise is a primary consideration as these controls do not create magnetic hum associated with some step-less forms of speed control

Features & Benefits

A range of transformer voltage controllers used to provide five speed step control of single phase or three phase motors where the peak current of the motor does not exceed the rating of the controller. Speed control is via selector switch. Single phase units are complete with illuminated on/off switch.

Determine pressure loss against required flow rate and add pressure loss value to system design pressure, verify that fan selection can accommodate extra pressure loss.
Original design: flow rate (m³/s) and pressure (Pa), with cowl becomes flow rate (m³/s) and (pressure (Pa) + pressure loss (Pa) from curve).
