

How to Square Your Grower's Solution Greenhouse

In Just 1 Easy Step

Step 1

Find Your Diagonal Measurement

In order to make sure your greenhouse is setup square we'll need 3 numbers to do so. We need the length, width, & diagonal measurements.

Use our table on the next page to find your diagonal distance in **inches**.

Our example above shows a 16' x 24' greenhouse. Using the chart from the next page we know that our diagonal measurement should be 346.3" across in order to be square. So now that we have our 3 measurements we can proceed with driving the 4 corner stakes and then double check our length, width, and diagonal measurements before proceeding with the rest of the greenhouse assembly.
