UST ZIP, FILL, AND WALK AWAY!
Just wrap our 20 Gallon Treegator® around a tree, zip the two sides together, and fill it with water - that's it!

Step-by-step Treegator® Original installation instructions:

STEP 1

- Place back of bag against trunk, with zippers on the uphill side of tree.
- Wrap both sides around trunk until zippers meet together:
  > Single bag fits 1" to 4" caliper (dia.) trees.
  > Two bags zipped together fits up to 8" caliper (dia.) trees.
- Zip both sides of bag together from bottom to top.

STEP 2

- Lift up tag at top of bag to expose fill opening.
- For added root growth benefits, drop in 1 (one) ROOTS® Solupak™ into fill opening.
- Insert water hose (up to 3" dia.), into fill opening, turn on water supply and begin filling.
- IMPORTANT: Fill bag only to approximately 1/4 capacity, then proceed to Step 3.

STEP 3

- Gently lift up on the two black straps at top of bag in order to fully expand bottom.
- If desired, add pre-mixed water soluble nutrients, or Hydretain® ES Plus Root Zone Moisture Manager.
- NOTE: Premix nutrients in separate container. (This step is not necessary with ROOTS® Solupak™)

- Fill with water to desired level.
  > Single bag: Max. capacity of approximately 20 Gallons
  > Two bags = Max. capacity of approximately 50 Gallons
- Treegator® Original will be empty in approx. 5 to 9 hours.

STEP 4

- For most newly planted trees (1" to 3" caliper), follow an initial fill schedule of 1 application per week.

*Before installation, please be sure to read and comply with the recommended Handling Precautions for this product.
