EL2000 Mach 3 Tech Sheet

Balboa Instruments System PN 55065-04

System Model # E2P-EL2000M3-YCAH Software Version # 32 EPN # 2833

Base PCBA – PN 53834-05 PCB EL2000 – PN 22896 Rev B HEX File – 10011432

Base Panels ML900 – PN 52654-01 ML700 – PN 52649-01 ML400 – PN 52684

System Revision History

System PN	EPN	Date	Requested By	Changes Made
55065-04	2130	11.16.2006	B alboa	Software update to v28
55065-04	n/a	07.20.2007	Balboa	Software update to v30
55065-04	2833	04.30.2008	Balboa	Software update to v32

Page 2 55065-04_97_A

Basic System Features and Functions

Power Requirements

- 240VAC, 60Hz, 48A, Class A GFCI-protected service (Circuit Breaker rating = 60A max.)
- 4 wires (hot, hot, neutral, ground)

System Outputs

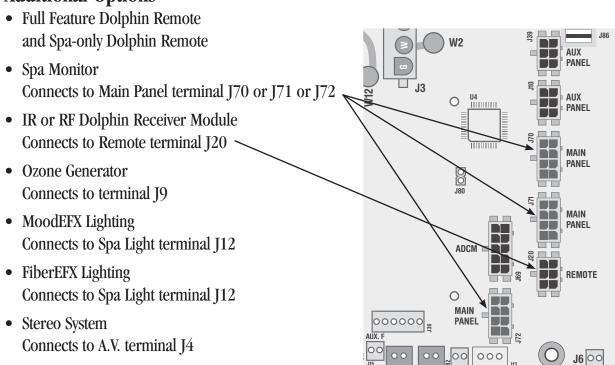

Setup 1 (As Manufactured)

- 240V Pump 1, 2-Speed
- 240V Pump 2, 1-Speed
- 240V Blower, 1-Speed
- 120V Ozone
- 12V Spa Light
- 120V AV (Stereo)
- 240V 5.5kW 800 Incoloy Heater *

Optional Devices

- 240V Circ Pump
- * Heater wattage is rated at 240V. When running 120V to heater, output is approximately 25%.

Additional Options

Page 3 55065-04_97_A

Persistent Memory and Powering Up

Any time you change DIP Switches or Software Configuration Settings that affect parameters the user can change (any filter settings, set temperature default, Celsius vs Fahrenheit, 12-hour vs 24-hour time, reminders suppression, etc), you must reset Persistent Memory for your DIP Switch or Software Configuration Settings changes to take effect. You should also reset Persistent Memory after loading a new file into a board (using the ESM, purchased seperately).

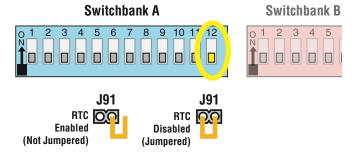

To reset Persistent Memory:

- Power down.
- Set A12 ON (See illustration below).
- Power up.
- Wait until "Pr" or "PRIMING MDJE" is displayed on your panel.
 Note: If "FF" appears see section below.
- Set A12 OFF. (This can be done safely with power on if you use a nonconductive tool such as a pencil to push the switch back to the OFF position. Otherwise, power down before setting A12 OFF)
- Power up again (if you powered down in the previous step).
- For all other power ups, leave A12 OFF.

About Persistent Memory and Time of Day Retention:

This system uses memory that doesn't require a battery to store a variety of settings. What we refer to as Persistent Memory stores all the User Preferences, as well as all the filter settings, the set temperature, and the heat mode.

Persistent Memory is not used for Time of Day. Time of Day needs to be "kept running" (not just stored) while the power is off, so a separate Real Time Clock feature (on all models except the EL1000) keeps track of Time of Day while the unit is off. Time of Day Retention, and Time of Day Retention alone, is controlled by the J91 jumper. J91 must be set according to main system panel used.

EFE message on power up:

If "FF" appears before (and instead of) "Pr" or "PRIMING MUJE", you have not configured DIP Switches and/or Software Configuration Settings in a valid manner. This must be corrected before you can reset Persistent Memory.

The switch numbers, jumpers, or configuration settings displayed after " \mathcal{LFE} " are ones with which the system has found a configuration problem. For example:

- "FF A5 b2" would mean that the combination of how you've set A5 and how you've set B2 is not supported on this system.
- "LFE 199" would mean that there is a problem with jumper 199
- "FF P3.1 b1. 1" would mean that the combination of how you've set pump 3 for 1-speed and blower for 1-speed is not supported on this system.
- "FF P3._ b1..." would mean that the combination of how you've set DIP switches which have been assigned to pump 3 and blower is not supported on this system.

Power Up Display Sequence

Upon power up, you should see the following on the display:

- Three numbers in a row, which are the SSID (the System Software ID). The third display of these numbers is the Software Version, which should match the version of your system. For example, if these three numbers are \$\frac{17}{17} \frac{1}{27} \frac{1}{27}\$, that is a Mach 3 EL8000 at version 26.
- If there is a Configuration Error, the FF message (see above) will appear at this point (and none of the messages below will display).
 Otherwise what comes next is:
- An indication of either the input voltage detected (EL1000/EL2000), or the heater wattage range supported (EL8000/GL2000/GL8000).
 - Heater wattage display: "I − ∃" means the system supports a heater from 1 kW to 3 kW. "∃ − E" means the system supports a heater from 3 kW to 6 kW. "∃ − ∃" means the system supports a 3 kW heater only. (These ranges may be modified slightly in the case of special heaters, which the next bullet covers.)
 - Input voltage display: A system showing "ʔြ" supports 3 kW to 6 kW heaters. A system showing "ʔြ" supports the very same heaters, although at 120V those heaters will function at only 1/4 of their 240V rated wattage. (The system shows only either "ʔြ" or "ʔြ" as a general indication of input voltage; it does not show the actual input voltage.)
- If your system is using a special type of heater, a display such as "H E"
 may appear next. If your system is using the generic Balboa heater, no
 heater type display will appear.
- "Pr" or "PRIMING MOJE" will appear to signal the start of Priming Mode.

At this point, the power up sequence is complete. Refer to the User Guide for the ML Series panel on your system for information about how the spa operates from this point on.

Page 4 55065-04_97_A

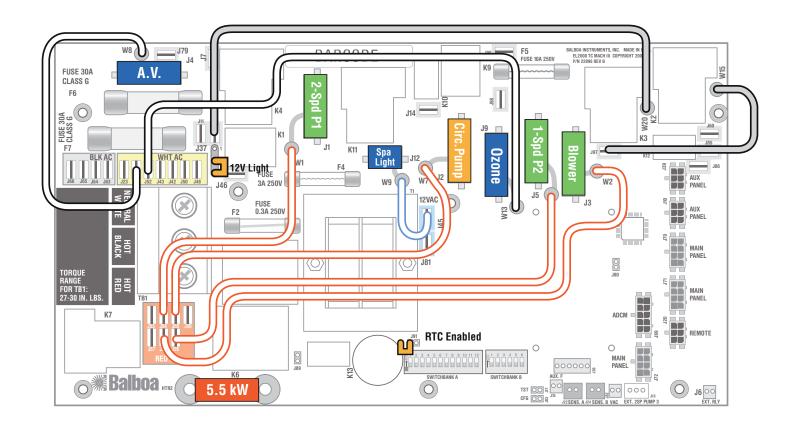

Wiring Configuration and DIP Settings

Setup 1 (As Manufactured)

WARNING: Main Power to system should be turned OFF BEFORE adjusting DIP switches.

- 240V Pump 1, 2-Speed
- 240V Pump 2, 1-Speed
- 240V Blower, 1-Speed
- 12V Spa Light
- 120V Ozone
- 120V A\V (Stereo)

- 240V 5.5kW 800 Incolov Heater
- ML900 or ML700 Main Panel
- 240V Circ Pump (optional)

WARNING: Persistent Memory (A12) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page) SSID# Wiring Color Key TST OO 5 When the Logic Jumper is not installed on J83 (CFG), 100 **120 Volt Connections** CFG 00 8 J15 DIP Switch Settings are enabled. 114 DIP Switches will then operate as shown below. DIP Switches and Jumpers Definitions

WARNING:

- Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
- Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
- Contact Balboa if you require additional configuration pages added to this tech sheet.

DIP S	Switchbank A Key			
A1	Test Mode (normally Off)			
A2	In "ON" position, heater can run while any/all high-speed pum	ps or blowers	are rui	nning
	(High amperage)			_
	In "OFF" position, heater is disabled while any high-speed pur	np or blower	is runni	ng
	(Low amperage)			
A3	În "ON" position, filter cycles are programmed by duration for	non-time cap	oable pa	nels
	In "OFF" position, filter cycles are programmed to start and er			
A4*	In "ON" position, displays time in 24 hours (military\European			•
	In "OFF" position, displays 12 hour time	,		
A5*	In "ON" position, displays temperature in Celsius			
	In "OFF" position, displays temperature in Fahrenheit			
*	Sets default for user preferences - only applies when persistent memory is reset (A	A12 On) durir	ng powe	er-up
A6	In "ON" position, Equipment timeout 30 minutes (4 hours for			•
	In "OFF" position, Equipment timeout 15 minutes (2 hours for

	In "OFF" position	0.11	٥٢٦	plumbed w/heater
	(non-circ mode operation) Pump 1 is two-speed, Ozone is	ON	OFF	24 Hours
	ON with Pump 1-Low	OFF	ON	24 Hr w/3°F Shut-Off
	(in any circ mode) Pump 1 is two-speed, Ozone is ON with	ON	ON	Acts like Pump 1-Low
	circ pump			(Filter Cycles, Polls)
A12	Persistent memory reset (normally off) (used when spa is			·
	powering up)			

DIP Switchbank B Key				
B1	In "ON" position, single-speed Pump 2			
	In "OFF" position, two-speed Pump 2			
B2	In "ON" position, Pump 2 enabled			
	In "OFF" position, Pump 2 disabled			
В3	In "ON" position, Blower enabled			
	In "OFF" position, Blower disabled			
B4	In "ON" position, Fiber and Wheel instead of Spa Light			
	(if A9 & A10 are both OFF, Fiber uses J2 connector; if either A9 or A10 is ON, X-FOW Kit required to run Fiber)			
	In "OFF" position, Spa light enabled			
B5	In "ON" position, Pump 3 enabled (Jets 3 replaces Blower on Aux panel)			
	In "OFF" position, Pump 3 disabled			
В6	In "ON" position, Alternate Panel layout (ML900 scrunching enabled - ML550 / 700 Jets 3 replaces Blower)			
	In "OFF" position, Normal Panel layout			

Jumpers

- Jumper on Pins 1 and 2 will power one leg of J12 (Spa Light) at 120 Volts AC. Jumper on Pins 2 and 3 will power one leg of J12 (Spa Light) at 12 Volts AC. Note: W9 controls voltage on the other leg of J12 and must be set for the same voltage.
- Jumper on 1 Pin only enables Real Time Clock function; use with time capable panels. Jumper on Pins 1 and 2 disables RTC function; use with non-time capable panels.

Ozone Connections

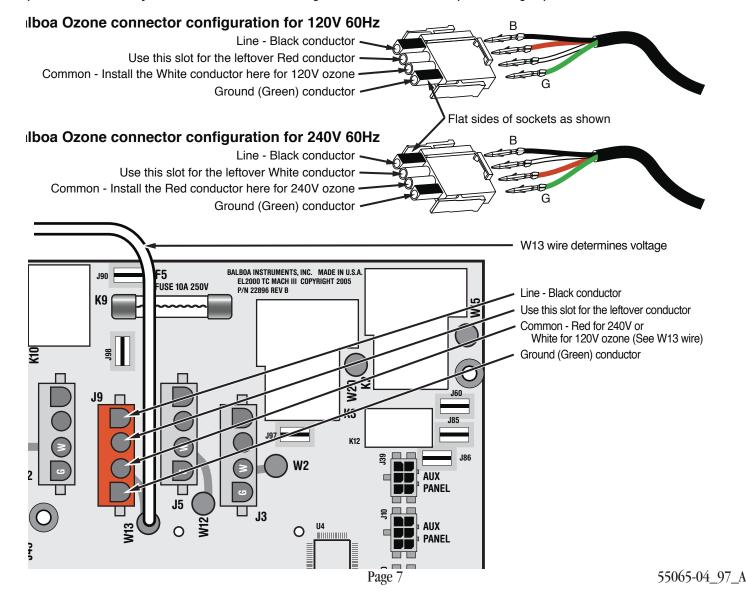

<u>Ozone Connector Voltage:</u> The EL circuit board is factory configured to deliver a preset voltage (120V or 240V) to the on-board ozone connector (J9). See the ratings table on the wiring diagram attached to the cover of the enclosure for the configured voltage. For 240V output W13 connects to Red AC and for 120V output W13 connects to White AC.

The voltage to the ozone connector can be changed in the field if required. W13 just needs to be set for the required voltage.

Balboa Ozone Generator: If the board is set up to operate a 120V ozone generator, the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

If a 240V ozone generator is required, be sure the red wire in the ozone cord is positioned in the connector next to the green ground wire as described below.

Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.

Panel Configurations

Note: RTC jumper (J91) on Main PCBA must be OFF (1 pin only)

ML900

PN 52654-01 with Overlay PN 40026

• Connects to Main Panel terminal J70, J71, or J72

ML700

PN 52649-01 with Overlay PN 11281

• Connects to Main Panel terminal J70, J71, or J72

Note: Connects to Main Panel terminal J70, J71, or J72 Note: RTC Jumper (J91) on Main PCBA must be ON (both pins jumpered), unless a Time Capable panel is also used.

ML400

PN 52684 with Overlay PN 11345
