

## Supplies

- Artesprix Iron-on-Ink™
- Blank Jewelry Pendant
- Plain Copy Paper
- Heat Tape
- Protective Paper
- Heat Source: Home Iron, Craft Press or Heat Press
- Project Mat (if using handheld Heat Source)

BLANK	TIME (Seconds)	TEMPERATURE
Jewelry Pendants	45	400°F

## Directions

1. Remove the blank jewelry insert, set aside silver pendant.
2. Trace the jewelry insert with a pencil on Plain Copy Paper.
3. Use Artesprix Iron-on-Ink to create the design. Keep in mind any text will need to be mirrored.
4. Place the blank onto the design and secure with heat tape.
5. Create a "Sublimation Sandwich." Cut two pieces of Protective Paper the size of the blank. Place one piece under the blank, and the other on top of the design.
6. Transfer the design at 400°F for 45 seconds. If using a Home Iron, refer to our Home Iron Directions for best practices.
7. Carefully remove the design from the Jewelry insert.
8. Once insert has cooled, add the adhesive insert into the Silver Pendant.

### Pro Tips:

- Ensure the project is positioned so the heat only has to go through the paper to dye the blank.
- After transfer, before removing tape and the design, confirm the transfer is bright and vivid. If it is not, check the transfer time, temperature, pressure, and how the project is positioned, and re-press.
