The French word chateau has a wider meaning than the English *castle*: it includes architectural entities that are properly called palaces, mansions or vineyards in English. The number of chateaus in France is estimated to about 45,000. During ww2 in France, chateaus were often used by both axis and allies as headquarters for senior officers, Gestapo or military police. Some also functioned as headquarters for the Resistance. Escaping Allied pilots and important arms depots were also hidden at chateaus.
