Dino Litter Bin

Dino Litter Bin

Well proven quality - further enhanced: our policy for development of legendary DIN bin and for improvement in handling and stability.

The **DINO** is our response to changing market requirements.

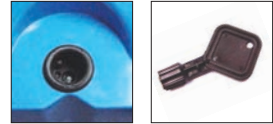

The high molecular polyethylene, manufactured by compact injection moulding process, guarantees a long service life is stabilized against UV rays and due to its characteristic material properties is extremely robust, frost and chemical resistant.

The rear side of the body is additionally reinforced.

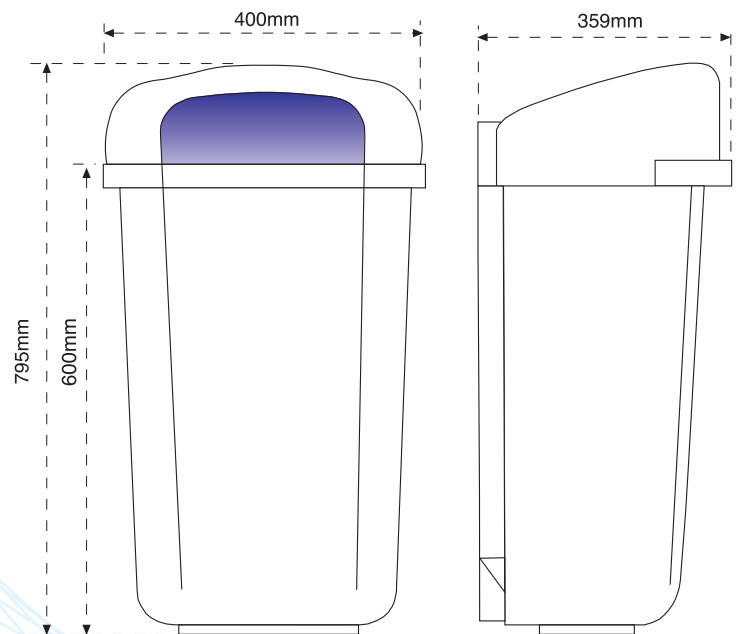

Cigarettes can be extinguished on the optional metal plate without damaging the bin.

Emptying – also by interchanging method – is carried out by simply unlocking with a universal key.

The stability of the DINO container was increased by optimising the shape and the thickness of the bin walls.

*Customisation of different coloured lids are available.

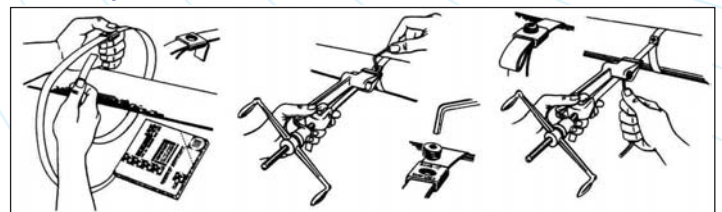

Specifications

- Container material: High Density Polyethylene
- Weight: 4 kg
- Capacity: 50 Litres
- Can be mounted on lamp posts, mast or on walls
- Options: Receptacle / using refuse bags
- Cigarette plate as option
