ARE YOU READY TO HAVE THE SLIME OF YOUR LIFE?

How to make slime stretchy:

- 1) Warm up slime in your hand.
- 2) Pull and stretch slime slowly for the stretchiest slime!

How to mix in slime accessories:

- 1) With slime on a flat, clean surface, place the accessories you want in the middle of the slime.
- 2) Fold slime edges over your slime accessories, and continue folding slime over and over.
Enjoy your new slime creation!
- 3) The glitter lids are stubborn! This is by design so neither you nor your little scientists accidentally make a mess. To remove, place fingernails under lid and pull up. You can also use a dull object like a butter knife to pop them off. Just be careful not to hurt yourself!

How to blow a slime bubble:

- 1) Take a generous-sized slime blob in your hand.
- 2) Insert a straw into the slime blob.
- 3) Seal the slime around the straw with your fingers.
- 4) Hold slime gently around the straw as you blow slowly into the slime.
- 5) Once you have a bubble, remove the straw carefully. Pinch slime together to seal closed the hole that the straw left behind. You now have a slime bubble!

How to make slime glow:

- 1) With slime on a flat, clean surface, place some glow powder in the middle of the slime. **HELPFUL TIP:** Use a small amount of glow powder at first so that your slime doesn't dry out too much. Go through all the steps here, & you can add more glow powder later if you need to.
- 2) Fold slime edges over the glow powder, and continue folding the slime over and over. You will need to fold it many times, kneading the slime well to mix in the glow powder properly.
- 3) Expose glow slime to a light source (flashlight, light bulb, etc.). Be careful **NOT** to touch any light bulb!
- 4) Take your glow slime to a dark place, and watch it glow before your eyes!

How to remove slime from fabric:

- 1) **FRIENDLY REMINDER:** Slime and fabric generally do not play well together, so please play with slime on a clean, hard surface for best results and happiest parents!
- 2) If slime **DOES** get onto fabric, no need to panic! First try to remove whatever excess slime you can remove easily from the fabric by hand.
- 3) Then thoroughly soak the affected area with distilled white vinegar. Let it sit for 30-60 seconds. (Soak longer for dried-on or stubborn slime.)
- 4) Scrub and wash slime off by hand, and then use warm water to rinse. (Repeat process until slime is removed.)

Do not eat
or drink
