Why not add on Dermalux LED \$55.00 to any of the above treatments for an even better result?

The Dermalux LED light therapy booster can heal and repair your skin, depending on its condition. Dermalux states that the LED wavelengths are known to increase collagen and elastin synthesis, reduce fine lines, improve the complexion, stimulate circulation, restore radiance, reduce congestion and improve acne-prone skin. LED light therapy also regulates natural oil production, strengthens damaged capillaries, relieves pain and redness, and works as an advanced regenerating and healing treatment.

Light Therapy Facial 60mins \$95.00

The light therapy facial is a popular series of treatments as it includes the visible benefits of deep cleansing, skin resurfacing, and the holistic healing of light therapy (as described above) — all of this is combined with a relaxing deep tissue massage and soothing face mask. This series of six or twelve treatments is designed to radically improve your skin and achieve lasting, enhanced results — you'll be thrilled with how great you look and feel!
