## CHRONOGRAPH WATCH

## Meca-Quartz Chronograph

This watch is powered by a Japanese made "Meca-Quartz" movement. It combines a battery regulated engine with a mechanical chronograph module. The result is a watch which delivers the meticulous pinpoint precision of a quartz movement along with the crisp, flyback handfeel and visual charm of mechanical watches.

For more details on operating this timepiece please refer to the enclosed booklet or visit:

## HOW TO SET THE TIME

1. Pull the crown to position [2]-(2nd click).
2. Turn the crown clockwise to set the correct time.
3. Push the crown in.

* Take A.M./P.M. into consideration when setting the hour and minute hands to the desired time.
* When the crown is at the position [2], do not press any button, otherwise the chronograph hands will move.

## HOW TO SET THE DATE

1. Pull the crown to position [1]-(1st click).
2. Turn the crown clockwise to set the correct date.
3. Push the crown in.

* Do not set the date between 9:00 P.M. and 3:00 A.M., otherwise the day may not change properly. If it is necessary to set the date during the time period, first change the time to any time outside it, set the date and then reset the correct time.

## STOPWATCH FUNCTION

- The stopwatch can measure up to 60 minutes.

## STANDARD MEASUREMENT

## ACCUMULATED ELAPSED TIME MEASUREMENT

Restart and stop of the stopwatch can be repeated by pressing the button A .

## USING THE TELEMETER

The most common use of a telemeter is for measuring the approximate distance from the observer of an event that is both visible and audible, such as a lightning flash and thunder. Based on how many seconds elapse from when the visible event is seen until the audible event is heard (the available measuring range is up to 60 seconds), the approximate distance can be calculated.

1. Start the chronograph when the visible event (lightning flash) occurs.
2. After the audible event (thunder) occurs, stop the chronograph.

The second hand points to the approximate distance on the outer bezel.

As shown in the illustration, 15 seconds elapsed from the lightning flash being seen to the thunder being heard, so the approximate distance to the storm's epicenter is 5 km .

Note: The telemeter indications may be on the dial ring, rather than on the outer bezel, depending on model.

## WATER RESISTANCE

Note that the water resistance chart serves only as a guide (please refer to the water resistance chart on the next page). Actual water resistance may vary depending on a number of factors including water temperature, water salinity and use under water. The water resistance of your timepiece may eventually be compromised over time with general wear and tear and use of your timepiece under adverse conditions.

Note that you should NEVER wear your watch in a jacuzzi, hot shower or steam room where steam may enter the case despite the watertight seals used to protect your watch. This may cause condensation inside your watch, which may affect and damage the inner workings of your watch.
