Subject: ESLF AND ESFF

Just wanted to let you know that I think your products are fantastic...I can't believe how healthy all my plants are. I had a dogwood tree that was pale green and all the leaves were brown on the ends and it just would not grow. I put your product on it and now the leaves are dark green and shiny and it has about 5" of new growth on it already.

Also, I almost took out a rose bush this spring that was really hurting for several years and especially after this past winter it was almost dead.....I put the ESFF on it and it came back fast...it now has a ton of new growth and blooms.

I had some sick looking house plants as well that I had for years and now after putting the ESFF on them they are all thriving.

Do you have any natural products for lawn pests...such as sod webworms? They attack my lawn every June and July. If so please let me know.

I told my neighbours about your products and now they are going to try them as well.

Thanks

John

Judy

... you know how long I have been using your product. well I ran out this year and did not put your product on the greens. Now with the draught we have no rain we lost a lot of green area from heat stress and I think a lack of nutrients. I am convinced that this product is very good. please send 2 x 5 gallon pails to this address.

Northwest Hyd
358 ... Rd
Warren, Ohio 44481

Thanks

Butch

Subject: Earthsmart Product Order **ESLF**
Thanks very much for your quick answer.

Here's our experience with Earthsmart's **ESLF**:

In the Fall of 2002 we had fescue turf installed in our front yard in San Diego, California, and had a large, secondary yard hydro seeded. Whether it was due to the quality of the seed, the density, weather or other factors, the hydro seeded area was not taking root. Because that area was adjacent to the lush turf it looked even worse. We have Labrador retrievers who graze on our grass, so we don't use chemical growth stimulants or fertilizers on anything. After extensive Internet searches for animal-safe, environmentally friendly options, we discovered Earthsmart ESLF Lawn & Turf Conditioner. As a test, we applied it as directed to a 100 square foot patch of unproductive seeded area that adjoined the very healthy turf. In just a few days the test area grew beautiful fescue. Within 2-3 weeks, you couldn't see any difference between the formerly barren hydro seeded test area and the adjacent, well established, fescue turf. Since that time, we have used ESLF seasonally, for our residence as well as our rental properties, and we swear by it. We get year round compliments on our green and healthy lawns.

Ben and Paula, San Diego, California,
Many thanks for all your help,

Paula

Subject: Lawn care advice,

Hi

I have used **ESLF** last summer, with great results.

I live in the Maritimes temperature is from 2 low and 18 high.

Question 1:

Is now a good time to start using **ESLF** or is it better to wait for more green to show and warmer temperatures ?

Question 2:

When is it a good time to speed lime, is early spring ok?

Thank you for your time

PG
