

## PRINT YOUR OWN 150-CENTIMETRE MEASURING TAPE!

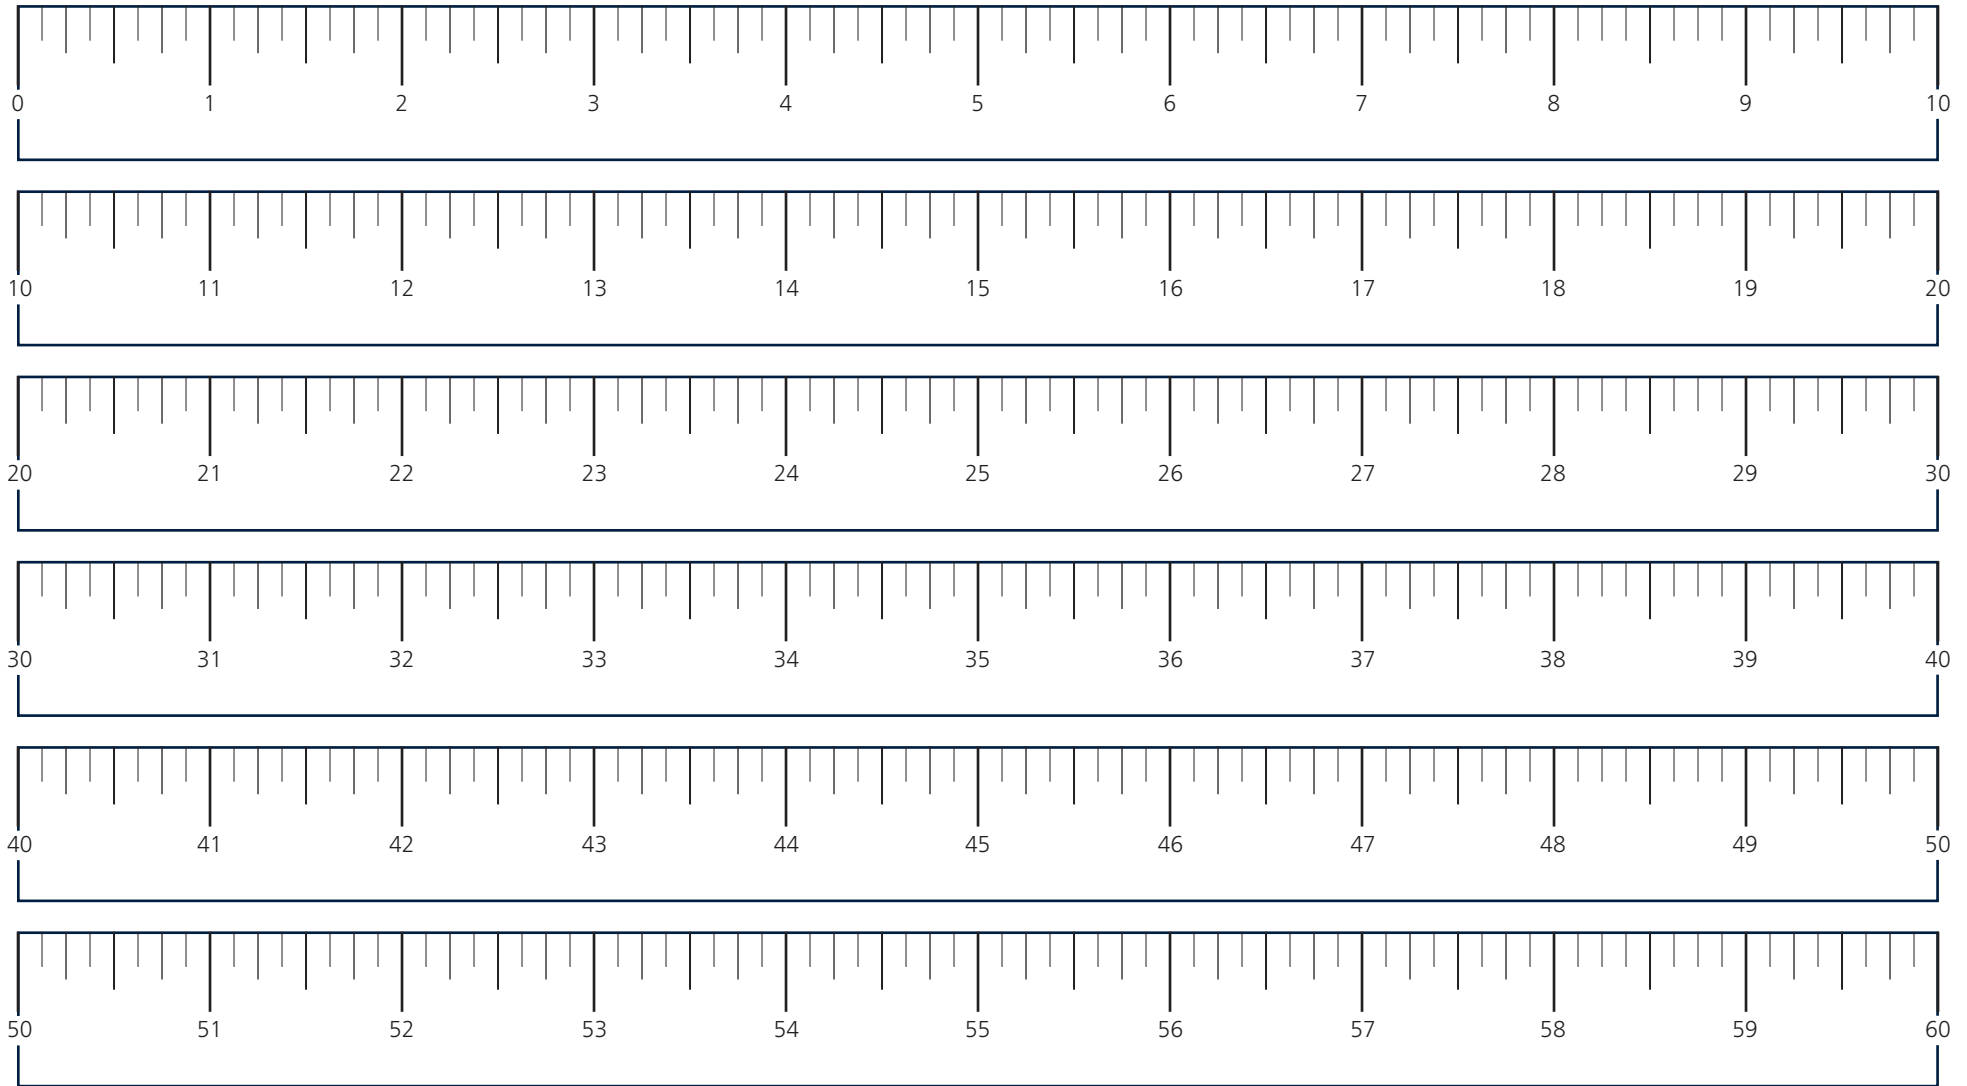

- You will need to print this at its current size for proper measurements, so make sure your printer is **not** set to “scale to fit paper” or “shrink oversized pages to paper size”.
- You may print in either colour or black and white.
- After printing, cut out each measuring tape and place them end-to-end on a flat surface, face down.
- Attach each tape measure to the next using clear tape or masking tape on the back.
- Congratulations! You now have a 150cm measuring tape to use!

To confirm your printed page is the correct size, this black box is the same length as a \$5 bill.
