HD Bliss 4 Digital Hearing Aid

Introducing our newest offering, the HD Bliss 4, an ideal pre-programmed option designed to address challenges related to speech clarity. This version is slightly smaller compared to the HD2.

It excels in various scenarios such as everyday listening, television usage, and small group gatherings. Perfect for occasional use.

For your convenience, the device is rechargeable and features a user-friendly rocker switch to adjust volume and switch between programs.

To ensure optimal comfort and fit, each pair of devices is accompanied by a range of fitting tips in small, medium, and large sizes.

The thin silicon tubing directs the amplified sound into the ear canal. A 'dome' is attached to the end of the thin tubing. The dome helps the thin tubing sit comfortably in the ear canal. The thin tubing should sit close to the side of the head, and when in place correctly, offers an extremely discreet fitting.

Don't just take our word for it...

"I can't believe how much I was missing before I started using Hearing Direct Bliss hearing aids. Now I can hear everything clearly and enjoy life to the fullest." John, age 55
