

# GEORGINA

With its generous dome shape and flowing expression, Georgina is as visually appealing as it is practical. The elegant fixture is fashioned from a sturdy, lightweight PET dome yet has a delicate, floating quality. The pattern and curve of the pendant softens the robust design, resulting in a striking acoustic pendant suitable for commercial interiors. In true Luxxbox form, the large acoustic shade also provides highly effective acoustic absorption to pleasantly zone open areas and create calming, comfortable spaces.

Georgina comes in one size (30.7" x 18.7" / 780mm x 475mm) and offers a neutral marled grey tone to suit any interior. Available with height-adjustable 9'3m black suspension cables, the fixture can be grouped and hung at alternating heights to create a unique display that increases acoustic coverage. For illumination, select from the patterned glass diffuser and LED light source, or opt for the softer E26/E27 lamp holder option. The shade is crafted from PET material manufactured from recycled plastics and is fully recyclable at the end of life.
