

BLADE

Slice through the noise for a more productive and enjoyable workplace with Blade. The ultra-slim pendant is designed to be hung independently, parallel in continuous runs, or staggered in clusters for a unique statement piece. Available with or without striking LED illumination, Blade reduces reverberated noise in open space for increased comfort and concentration. Illuminated Blade pendants can also be installed alongside unlit Blade baffles for increased acoustical benefits.

Available in four heights, four widths and a wide range of colors, Blade allows for optimal customization to suit any interior space. Offered in several finishes, Basica (flat) and Ranura (ribbed), the printed MOTIF collection or Terrain embossed acoustic panels, the pendant is crafted from the option of pure wool or a PET material, a dense polyester fiber material that is manufactured from recycled plastics.
