

Winder Steps

Many staircases make 90 degree turns which result in winders or “pie shaped” pieces. Commonly one might find 2 or 3 winder steps making a turn. In each case the winders will form a rectangle, which is often close to square. For a basic quote on custom winder steps, we will need the dimensions of the rectangle formed by the winder steps. In the first illustration, the measurements we need are 36”x 36”.

If you are ready to order your winders, we will need you to provide paper templates of the exact rug sizes needed. You will want to factor in the amount of border on each side of the straight steps, and be consistent when you measure for your winders.

In these illustrations, the orange shapes are what we will send to our weavers to use at the loomside.

For paper templates you will need:

- A roll of basic brown paper or equivalent
- Blue painters tape or masking tape
- Scissors
- Straight edge
- Paper and pencil for rough sketch and measurements
