THE SWAG

Tired of throwing out rotten fruit and vegetables on your trips? More than just an inconvenience, when food rots in landfill, it gives off methane, a greenhouse gas which is 25 times more potent than the carbon pollution from car exhausts. Plus, when you throw away uneaten food, even into the compost, you are wasting the water, fuel and other resources it took to get that product from the farm to your home.

Meet The Swag, a non-toxic, washable and reusable bag that keeps produce crisp, healthy and happy for weeks (not days), helping you reduce food waste and make fewer stops for supermarket visits. You'll also have the confidence that your fruit and vegetables will last the distance.

The Swag has a unique patented three-layer design to help keep fruit and vegetables fresher for longer. The inner layer provides a dryer protection layer. The middle layer is thicker and holds moisture, allowing the fresh produce to breathe and hydrate. The outer layer helps to keep this hydration by providing protection. This all helps to create the perfect environment for storing fruits and vegetables.

With a wide range of size options, you can buy The Swag products individually to test them out or go for one of the bundles to fully use the philosophy.

• We all want to spend more time outdoors. What if getting there was an easy, split-second decision?

Dometic has grown its outdoor gear solution offerings with a collection that enables more effortless outdoor adventures for the passenger car. The Dometic GO collection of pack, stack and go gear features versatile camping products designed for car-based camping.

The Dometic GO vehicle-based camp kit is elevated by design, innovation, and durability. Made with lightweight materials and smart design for easy packing, the new collection equips the car for long days on the trail and nights around the campfire.

Dometic GO reduces your packing time and removes the obstacles involved with preparing to hit the road and take on outdoor adventure. The collection is created for 'vehicle-based adventure' where people use their daily cars as a basecamp for outdoor activities. Designed to fit into the back of a mid-size SUV or vehicle, this new collection will transform any car into a basecamp in minutes.
