

Ski Lift Assembly

The Tower Locations

As you look at the above picture, the left most tower is Tower 1, the middle tower is Tower 2, and the right tower is Tower 3.

1. **Before you assemble the rest of the Mission Objects, place double sided tape under the mat for Tower 1 & Tower 2. This will allow the string to stretch without effect the position of the Towers.**
2. Dual Lock Tower 1 & Tower 2 to the mat
3. Using a ruler, Dual Lock Tower 3 on top of the Quad Platform, 1&1/2 inches from the left corner of the Quad Platform.
4. Starting with Tower 3, run the string through the holes on the end of both grey beams. Secure with the 1x2 grey brick supplies with your Debris.

5. Run the string through the top hole on Tower 2

6. Run the string through the bottom hole on Tower 1

7. Now run the string through the opposite side of all three towers in the same position.
8. Make sure the string is tight, without pulling over Tower 1. Locking the string at Tower 3 with the 1x3 white brick from your Debris.
9. Now place the Ski Lift Worker on the string, upside down, above the Blue & White target on the mat.

The weight of the Ski Lift Worker will cause the string to bow and Tower 1 to lean a little. That is OK.
Provided you used double sided tape as explained in Step 1.

**Review the videos for the correct placement for this mission object on the mat at the start of a Match.
Review the videos to see the correct scoring position for this mission object at the end of the Match.**
