Attention: Mr Gary Allsopp

Dear Gary,

Since the treatment of one of our sheetmetal chiller boxes with Astec flexible coating an interesting observation has been made.

We have installed temperature recorders in 2 vans for direct comparison and whilst the outside temperature has not been high enough to give us the results we are looking for the fridge running times are interesting.

Over a weekend, meters were installed on both trucks to monitor the hours that the units were actually running.

Results being that the van without insulation over a 48 hour period the fridge motor ran for 30 hours whilst the insulated van the motor ran for only 13 hours, with the temperature on both trucks not going over 5 C.

This result in its self has to be an additional cost saving on power as well as wear and tear on the plant.

As the weather hots up then we will be able to get a direct comparison on both vans for inside temperature and as the results come to hand I will inform you of the findings.

Yours sincerely,

J E SPARTLEY
STATE MANAGER

Attention: Mr G Aillsopp

Dear Gary

As discussed, enclosed are the results of a survey conducted over three weeks on two vans.

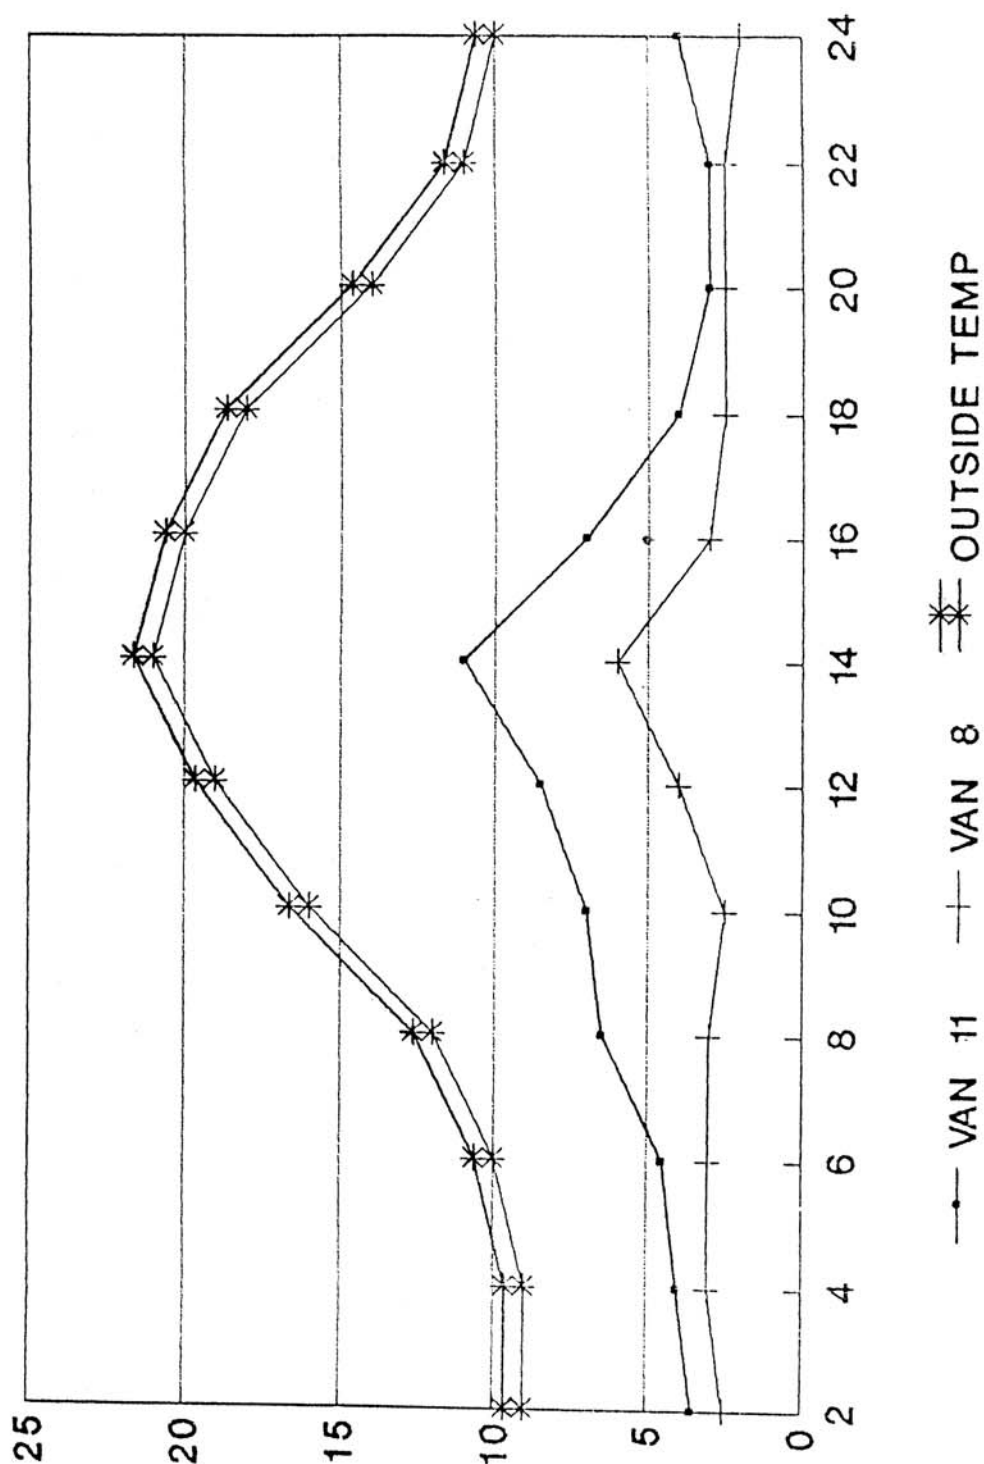

For your information Van 8 data reflects the vehicle that has been insulated.

As can be seen the results speak for themselves and that is the insulation is successful in maintaining a more satisfactory temperature.

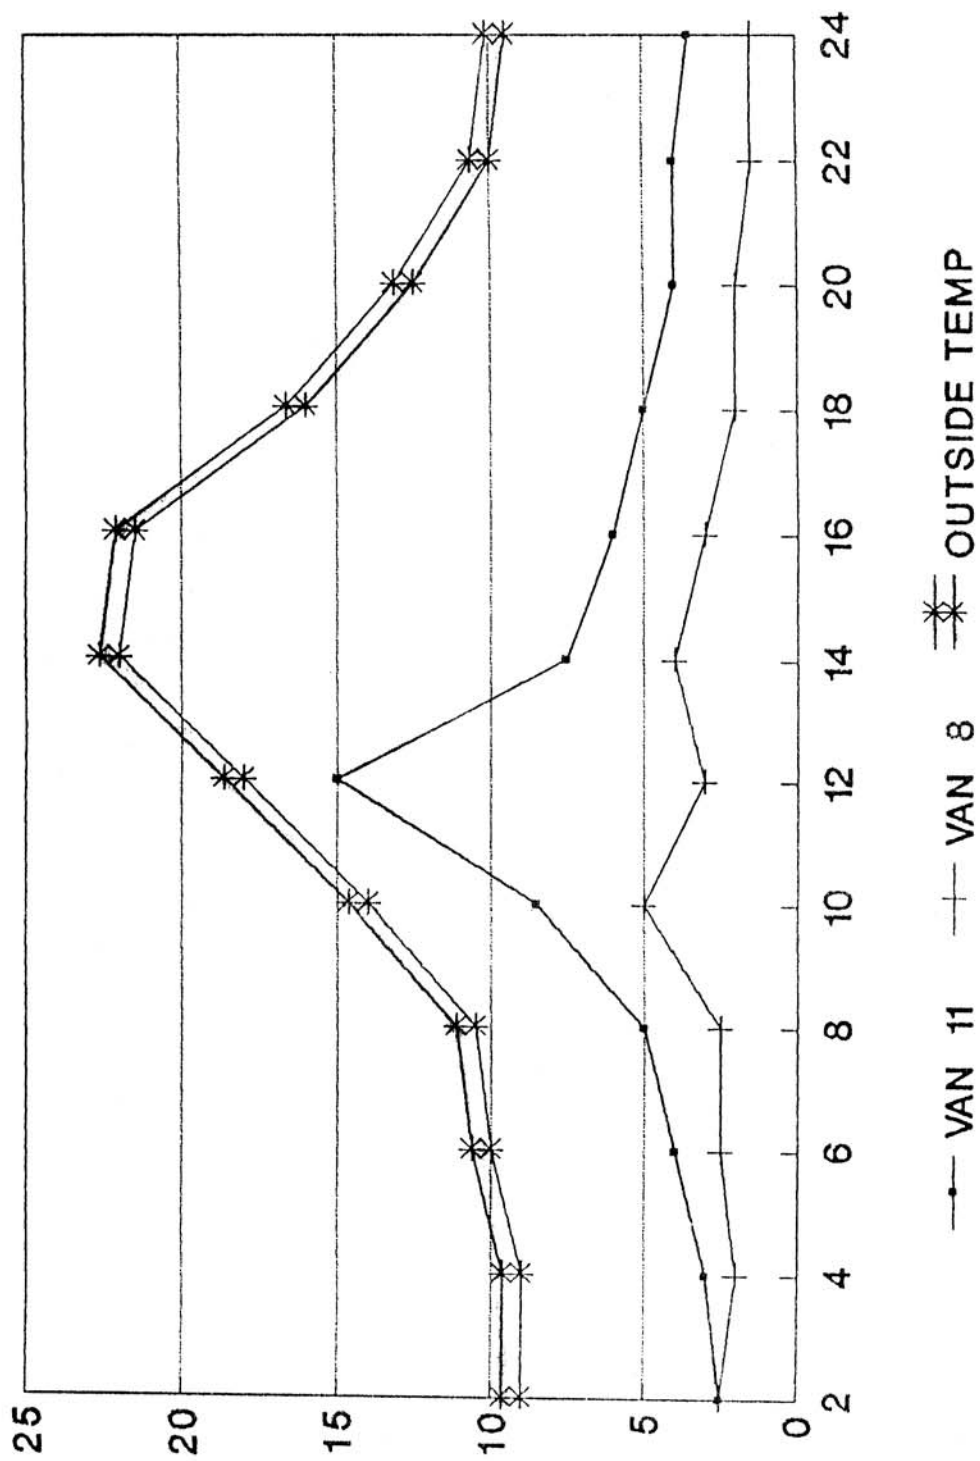

Yours sincerely

JOHN E SPARTLEY
