Mr. M. Sly
Tile Brite
24 Pinn Street
ST. MARYS SA 5042

Dear Mr. Sly,

In looking for a roof paint we were particularly interested in decreasing the summer heating of our iron roof. The Astec range of ceramic paints seemed to be the best system in that it reflected most of the heat as demonstrated at the Home Show.

The staff of Tile Brite presented the system in a most professional but easy going manner which was most refreshing. Inspection of the roof prior, during and after the roof preparation and paint application gave us additional confidence in the system, and the company.

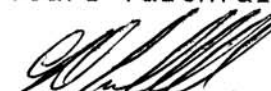

In the three months since the roof was painted we have found:-

- . a significant reduction in interior heating on hot summer days, with much reduced air conditioner usage,
- . excessive expansion noises from roof and roof timbers have been almost eliminated,
- . reduced noise from rain through the exposed beam ceiling.

Even though the system is significantly higher in cost compared to a standard roof paint system I believe the proven short term benefits and probable long term advantages are worth the extra cost.

I have no hesitation in recommending the Astec paint system and the Astec company for application of it.

Yours faithfully,

C.D. COCKSHELL
