

## Baby's first teacher

In Dr. Maria Montessori words, 'education is acquired not by listening to words but by experiences in the environment.'

To us, the parent's role as baby's first teacher means to act as a guide so your child can learn for himself through exploration.

We can facilitate experiential learning by choosing what we put in the environment, observing our child's development and introducing things that meet their developmental needs.

Experiential learning also helps your child better understand concepts, better retain information and later to successfully apply that knowledge.

## Why Montessori?

**The Montessori Method strengthens certain brain functions that help *expand cognitive development*. I've nicknamed it "the original system of learning based on the brain."**

– Steve Hughes, neuropsychologist,  
pediatrician, and Montessori father

From month 2: Strengthening vision and awakening  
the senses

## 2-in-1 Mobile: designed to nurture baby's developing brain

### What is a Montessori Mobile?

In Montessori, mobiles are a go-to item for visual development in the early months.

In the old school parenting paradigm, mobiles were about entertaining or boring a baby to sleep.

In Montessori philosophy, they are about developing and strengthening baby's vision and concentration. Sometimes this is described as 'working' through play.

Montessori mobiles are “powered” by natural air movement and support the practice of visual tracking and concentration.

The natural movement of the air in the room moves the mobiles at slow speeds allowing your baby to focus with an appropriate level of challenge.

Hang from a play gym, above the change table or near an open window and watch your little one be mesmerised.

Safety watch out:  
The Mobile is for the eyes to enjoy, not the hands to grasp.  
Or in the words of  
Australian consumer law:

**Warning! Adult supervision is required.**  
Attach these toys out of reach of the child.

To prevent possible strangulation or injury by entanglement, remove the toy when the child starts trying to get up on hands and knees in a crawling position.
