

# RETROFIT/REPLACEMENT INSTRUCTIONS

If you are swapping out your existing 3508W or GBH100/250/300 heater, please follow steps below:

- 1) Ensure that backing plate has been installed correctly during initial install – the required clearances are detailed on the **READ ME FIRST SHEET** and again in the instruction manual.
- 2) Remove current heater from mounting base by inserting a blade screwdriver into the hole located below the middle of the outlet grill.

- 3) Rotate the screwdriver until the clip releases.
- 4) While holding the heater, gently push up with the screwdriver, sliding the heater off the wall mounting base.
- 5) GBH450/550 can then be slipped straight onto the existing wall mounting base. You should hear a click as the heater locks into place.

- 6) Your new bathroom heater is now ready for use.
