

What is CurcuCat?

Due to the success of our turmeric joint supplement for dogs, Curcupet-K9, we didn't want cats to miss out.

CurcuCat is a joint care supplement for cats of all breeds as well as moggies; from Persian, British Shorthairs and Maine Coons to Abyssinians, Siamese, Bengals and more. Made with the same formulation as our human Turmeric+, which is 30x more absorbable than standard turmeric.

The small, flavourless tablets are easy to conceal in your cat's food and can be swallowed whole or easily crushed. Each tablet contains Curcuma Phospholipid Complex, a patented combination of curcumin - the active ingredient in turmeric - and soy lecithin, a fat from soya beans, which makes curcumin easier for the body to absorb.

We use this technique to increase absorption as opposed to other ingredients such as black pepper. CurcuCat is suitable for adult cats of all sizes and breeds.

Directions

Give 1 tablet every other day, whole or crushed into food.

Not suitable for animals that are allergic to soy. Not suitable for kittens.

Our pet health range also includes a turmeric supplement for dogs called Curcupet-K9
