To whom it may concern:

## Compliance Letter

ATSA is a manufacturer association which establishes guidelines allowing members to show compliance of their tornado shelter products to qualification criteria for various government consumer rebate programs. This letter is in regard to ATSA member Staying Home Corporation.

We attest that, as a member of ATSA in good standing, Staying Home Corporation. sells and installs products, produced by Staying Home Corporation, which have been successfully debris impact tested and engineered and shown to be compliant with the ICC 500, FEMA 320, and FEMA 361 standards. As part of the verification process Staying Home Corporation has provided ATSA with all necessary engineered drawings and test data for the following:

7'6"x2'6" steel above ground shelter  
11'4"x3'9" steel above ground shelter (rolls out to meet that dimension)

Conditions of Customization:

- The shelter door frame support tubes must be at least 1"x 2"x 14 ga.
- The reviewed design criteria must be used when the dimensions of the shelter are customized.
- The dimensions of the shelter can be customized as long as they are the same or smaller in all directions.

Note: As a general rule, a smaller shelter will be stronger than a larger one of the same design and materials.
