Description and Applications

ER316L is primarily used for welding low carbon molybdenum-bearing austenitic alloys. This filler metal has the same analysis as ER316, except that the carbon content is limited to a maximum of 0.03% in order to reduce the possibility of formation of inter-granular carbide precipitation. This low carbon alloy is not as strong at elevated temperatures as ER 316H.

Typical Weld Metal Properties

	AWS Spec
Tensile Strength:	88,000 psi
Yield Strength:	58,000 psi
Elongation:	34%

Recommended Parameters

GMAW

Wire Diameter	Voltage	Amperage
0.035”	16-26	70-160
0.035” (Spray)	26-31	150-230
0.045” (Spray)	28-32	180-280
