Laboratory note: The estimated concentration of the unknown peak in the sample is 0.52% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either 4.98-THC. Or dP-THC. At this time there are no reference standards available for (+)d8-THC. (+)d8-THC is a direct compound from the min (-)d8-THC cannobinical and, therefore, these two compounds may have dierent access. Using the most advanced instruments and D8 Concentration between the control is estimated to be 1.25%. Although the control is problematic for the scientific community as a whole. PharmLabs believes the undestribed peak to be a combination of (+)d8-THC and dP-THC and the control is problematic for the scientific community as a whole. PharmLabs a whole is a w

CAN+ - Cannabinoids Analysis

Analyzed Mar 24, 2023 | Instrument HPLC-VWD | Method SOP-001
The expanded Uncertainty of the Cannabinoid analysis is approximately ±7.806% at the 95% Confidence Level
