

GTech Protection Keeps Workspaces, Vehicles, Hands Virus and Bacteria-Free

Disinfectant sprays leave microscopic protective barrier for long-lasting results

Working in an industry that has patients, customers or clients coming and going throughout the day requires disinfecting and cleaning items frequently to help prevent the spread of germs. But most workers do not have time to deep clean every day and the products that are currently on the market do not have lasting results and need to be used daily to be effective. GTech Clean is a long-lasting disinfecting spray that quickly and safely sterilizes all types of rooms, equipment and vehicles. It is used and trusted by First Responders across the country to disinfect their fleet, jails, uniforms and equipment.

GTech Clean is an EPA approved ready-to-use spray that kills 99.9% of bacteria and viruses including SARS-CoV-2 (COVID-19) influenza, mildew, mold and more. The one-step spray kills viruses, bacteria and fungi quickly and leaves a microscopic protective barrier on hard and soft surfaces that continues to kill pathogens for up to five days. The non-toxic and non-flammable formula is safe to use on all surfaces and is skin-friendly. Unlike other products, GTech Clean does not contain harmful chemicals like ammonia, bleach or alcohol and there is no need to dilute the solution or wipe it away after spraying it. Users just spray the area they want to disinfect and let it air dry.

By using GTech Clean, businesses can save money on having to hire a cleaning company to disinfect workspaces and/or shared vehicles, and the labor cost of needing to disinfect every day. GTech Clean is ideal for use in offices, public transportation vehicles, medical offices, retail outlets, restaurants, salons, schools, daycares, senior living centers, vets and gyms. For cleaning every surface in larger areas, GTech Clean can be dispersed through an electrical or battery-operated spraying device that will ensure the active ingredients are distributed quickly onto every surface for a thorough clean. Most rooms can be fully decontaminated for the cost of just a few dollars. Vehicles can also be sanitized quickly using GTech Clean and a sprayer.

GTech Protection also offers GTech Armour, a non-alcohol antimicrobial hand sanitizer spray that can be effective up to three hours after being applied. The non-rinse hand sanitizer spray kills 99.9% of germs in seconds and the skin moisturizing formula will not dry out or crack skin like traditional sanitizers are known to do.

GTech is an affordable and efficient sanitizing solution for rooms, common areas, and vehicles. Using the GTech nuPower Trigger Sprayer (electrical) it will take approximately 3.5 minutes to totally disinfect a 1,000 square foot room, using approximately 7 ounces of product at a cost of less than \$0.50 per ounce. That translates to approximately \$3.50 to disinfect 1,000 square feet. The nuPower Trigger Sprayer can totally disinfect an SUV in less than one minute, using approximately 1.5 ounces (or less) of product for a total cost of \$0.50 to \$0.75 per vehicle.

GTech Clean, GTech Armour, and the nuPower Trigger Sprayers are now available, visit: www.GTechProtection.com to purchase.

About GTech Protection

GTech Protection is a division of FTI. GTech Clean was created by husband and wife team, Dr. Roger Chang and Lisa Chang. They created the safe disinfectant when their children's skin broke out in rashes after using store bought products to disinfect their sports gear. The Changs teamed up with renowned chemists and created a disinfectant that is safe, simple to use, quick to apply, long-lasting and affordable. For more information visit www.GTechProtection.com.
