WINEMAKING

The Shiraz was machine harvested then destemmed/crushed into static fermenters where it was fermented using yeast selected to express desirable varietal flavours and aromas. The fermenters were pumped over with aeration twice a day, temperature was held around 25°C to prevent over extraction of tannins locked in the skins. Maceration was not extended due to the same reason. The wine was then pressed and transferred for malolactic fermentation on oak allowing a soft integration of the grape and Oak tannins. The wine was blended and bottled after 12 months maturation.
