**Proposition 65 Statement for California Customers**

Dear Customer,

Chemicals known to the State of California to cause cancer and reproductive toxicity, including acrylamide, are present in roasted coffee. Acrylamide is not added to our products, but results from cooking such as when coffee beans are roasted. As a result, acrylamide is present in our roasted coffee beans, and brewed coffee.

Your personal cancer risk is affected by a variety of factors. The Food and Drug Administration (FDA) has not advised people to stop drinking coffee or eating baked goods that contain Acrylamide. For more information regarding the FDA's views, visit [www.fda.gov](http://www.fda.gov). For more information about Acrylamide and Proposition 65, please visit [www.oehha.ca.gov/prop65/acrylamide.html](http://www.oehha.ca.gov/prop65/acrylamide.html)
