Versatile sterile drape management.

Designed to support a sterile drape over the patient, the extremely versatile Drape Support offers a wide range of imaging table placement options. With two articulating joints, it can be easily manoeuvred to suit procedural and patient requirements.

Set-up is achieved in seconds as the daggerboard slides under the mattress at a convenient position. The adjustable surface is ideal for supporting lightweight equipment such as syringes, kidney bowls, etc. It is transparent for patient comfort, helping to reduce anxiety.

Clinically tested, it can be used in numerous interventional radiology and cardiology procedures such as antegrade femoral artery access, jugular artery access, transcutaneous pacing, portacath insertion or as an anaesthesia screen.

The Drape Support is crafted entirely from radiolucent, high-performance engineering plastics for superior rigidity, durability and resistance to chemical attack. The Drape Support is lightweight and compact taking up minimal space around the imaging table and even less when folded for storage.

KEY FEATURES

- Optimal patient comfort reducing anxiety
- Quick set-up and removal
- Work surface for light-weight items
- Extremely versatile
- Fits all tables
- Radiolucent
- Takes up minimal space around table
- Light-weight, small storage footprint
VERSATILE AND MANOEUVRABLE

The lower joint allows the locking leg a wide range of motion for a variety of procedures. The clear support surface can be manipulated and locked at the desired position.

APPLICATIONS

Interventional Cardiology
- Jugular Vein Access
- Transcutaneous Pacing

Interventional Radiology
- Antegrade Femoral Approach
- Central Venous Catheter placement
- Portacath placement

Anaesthesia Screen for general surgery

SPECIFICATIONS

Drape support
Product code: AM1000
Weight: 1.2Kg
