With body part on stretch, apply patch(es) over swollen or inflamed area

AFTER

Affected area shows reduction in swelling or inflammation*

For more information, go to kttape.com/recoverypatch

1 BEFORE YOU START

Here are some important tips to get you the best possible results.

Apply within 48 hours of initial onset of swelling or inflammation.

Clean dirt and oils from skin and allow to dry.

Trim excessive hair for better adhesion.

Position the area of application so that the skin is on stretch.

Do not apply any stretch to this patch. Overstretching patch may result in skin irritation or blisters.

Gently remove patch from skin, use baby oil if necessary.

*Not clinically proven for all applications
