

FOR CORRECTION FACILITIES

WHAT IS IT?

The **Nintendo Switch Lite** is a family-friendly, personal gaming device released in 2019. It's one of the most popular gaming systems out currently, and has tons of modern and classic games available.

We've **secured the whole system**: We open up the device to remove Wi-Fi capabilities and place anti-tamper stickers over the seams. The microSD card door can be glued shut after installing. The device is guaranteed to not connect to Wi-Fi, keep the (optional) microSD card inside, and still play games.

Since the device is **completely hand-held**, there's nothing needed besides the charging cable. No TV, internet, or other settings are required to play.

WHAT IS THE PROCESS?

Residents can **choose one from our list of games** along with their new Nintendo Switch Lite. Send in your order form with the color, microSD size, and accessories requested along with money payment to our address. We can also provide system-only setups, and setups with 1-2 games. Let us know what works best for you.

We'll **download** all of the games you request. We'll make sure they're updated to the latest version and that the system is running smoothly.

We'll **ship to you** for free. If you want more games in the future, we supply a small list of physical games you can order that will play.

HOW IS IT PRICED?
