03 Baby Doge Coin

Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralized exchanges on BSC offering lightning-fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (Defi). BSC uses a token protocol developed by the BinanceTeam called BEP-20. Known for 5 second block speeds much faster than doge with 1 minute block speeds. These 2 articles compare block speed:

Doge 1 Minute:

Bep-20/BSC 5 seconds:

Advantages of the Binance smart chain are:
It's a proprietary blockchain, which will provide security and safety to all users and developers.

Its native dual chain interoperability will allow cross-chain communication and scaling of high-performance dApps that require a fast and smooth user experience. It's EVM-compatible and will support all of the existing Ethereum toolings along with faster and cheaper transactions.

Its on-chain governance with Proof of Staked Authority consensus, built on 21 validators who validate the transactions, will provide decentralization and enable significant community involvement.

04 Ecosystem

Community-Powered

Baby Doge is owned by its fun, vibrant community.
We welcome and embrace diverse perspectives to build Baby Doge into the best community in crypto. With a do-good mission of helping save dogs in need.

Instant Rewards

For every transaction in the Baby Doge network a 5% fee is distributed to existing holders. That means you earn more Baby Doge just by holding it in your wallet.

Locked LP

Initial Liquidity tokens are burned and locked. Additionally, 5% of all transaction fees are added to liquidity.

Here you can view LP holders:

05 Baby Doge Protocol

Baby Doge employs 3 simple functions: Reflection + LP acquisition + Burn. In each swap, the transaction is charged a 10% fee, which is split 2 ways.

5% 5% fee = redistributed to all existing holders.
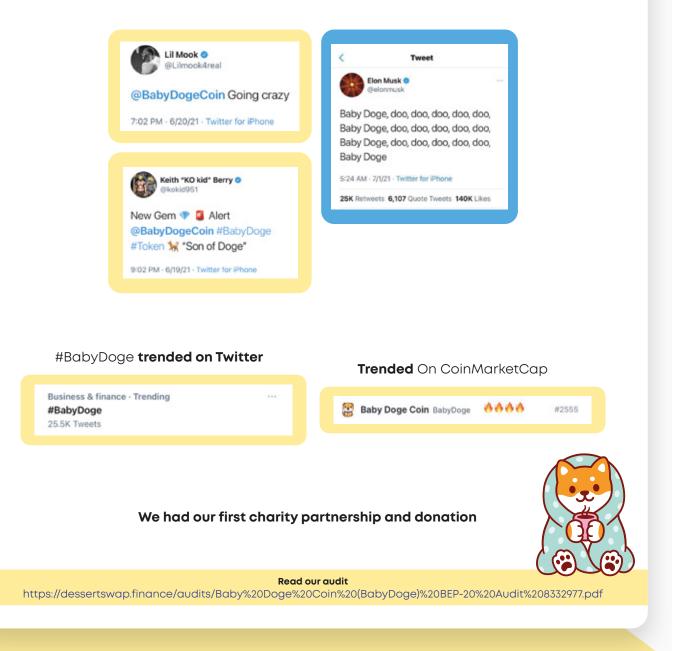

5% 5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the BABY DOGE tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap. This fee powers the project.

5% 48%+ of the total supply has been burned so far so 48%+ of the 5% redistributions are burned with every transaction.
