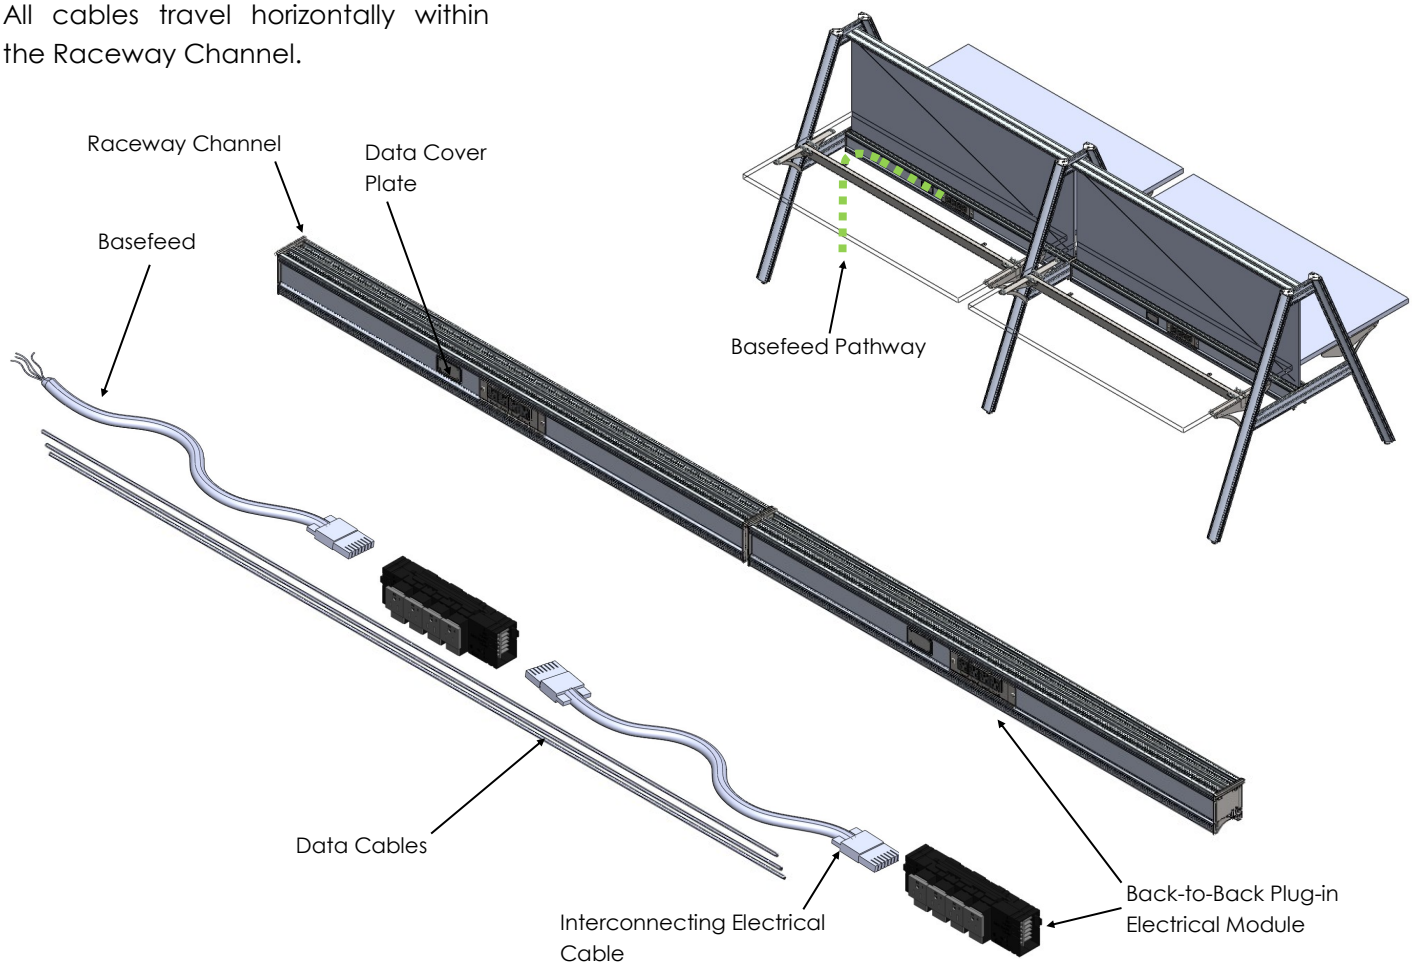
Electrical Pathway

All cables travel horizontally within the Raceway Channel.



External Electrical Management

If cable management is required outside of the Raceway Channel, complementary products are available to help. The Wire Basket and Tray style managers add additional cable capacity down the spine of the station. The Low Profile Wire Manager can attach to the underside of the worksurface wherever additional cable management is required.

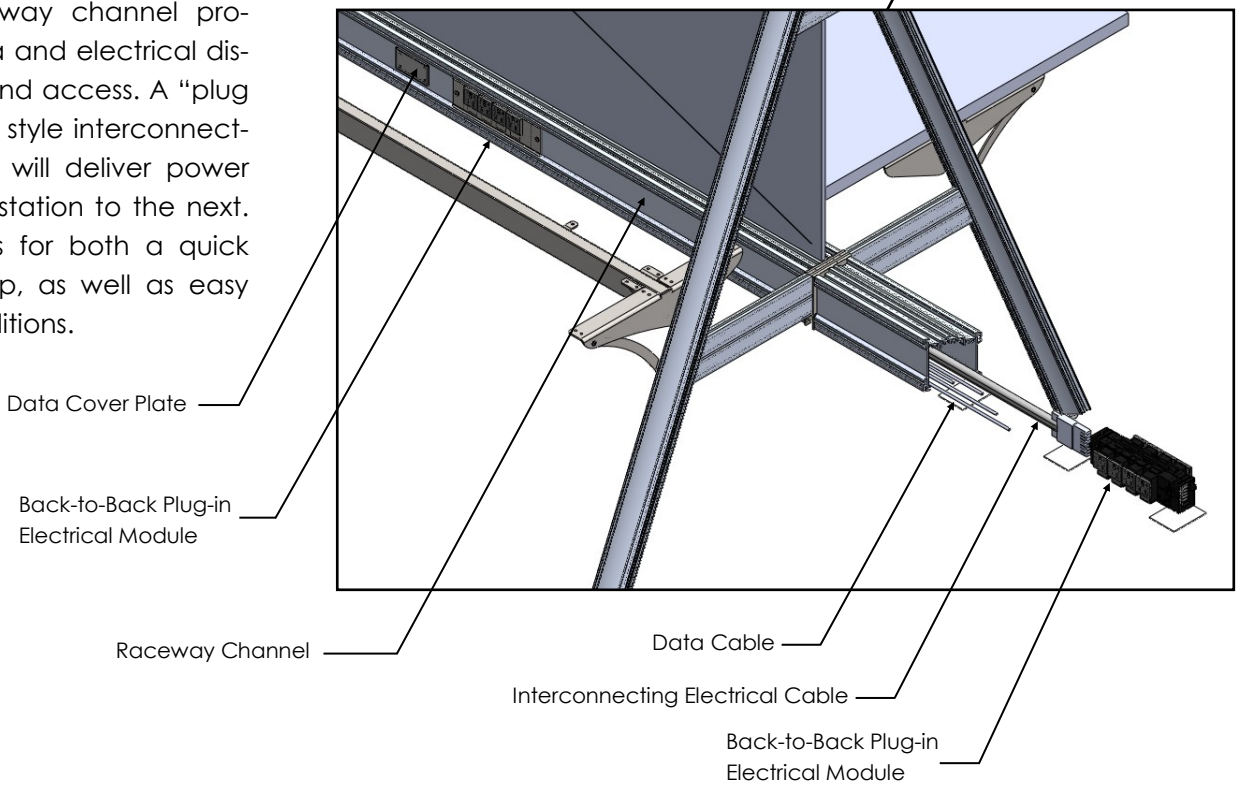
Electrical details

The Raceway channel provides data and electrical distribution and access. A "plug and play" style interconnecting cable will deliver power from one station to the next. This allows for both a quick initial setup, as well as easy future additions.



Whether you would like to order a pre-configured station or build to suit your exact needs, Truss can be specified one of three different ways to move your project forward.

1) Simply choose a **Typical Station from pages 9-11** to suit the needs of your project. Select from the list of Grade 1 Finishes and you're done!

OR

2) Pre-configured **Frame Kits** are available to make specifying easy. Choose your desired size and add your **Surfaces** and **Electrical Cables**. To further customize your workspace add dividers and storage.
