

LET'S LEARN ABOUT THE T-REX!

Tyrannosaurus Rex had powerful back legs that let it hunt prey over short distances at up to 20mph (32 kph). They would have charged out of the undergrowth to surprise their prey - and their flexible neck helped them adjust the angle of attack.

terrifying teeth

its sharp-pointed teeth were strong enough to crunch through the heavy armour of its prey

small arms

Tyrannosaurus's arms were tiny compared to its body, but had strong muscles for gripping prey

powerful legs

the legs had huge thigh muscles for charging into attack with lethal speed

long tails

The long tail helps the T-Rex to keep his balance because of his large heavy head
