

USB affects your everyday life.
We'll show you how.

A One-Stop Upgrade For Tablets, Laptops, And Desktops

 August 15, 2016

For those wanting an upgrade to their tablet, laptop, or desktop without having to purchase a completely new machine, the USB 3.0 Docking Station from Accell is the boost to functionality and speed that all users can appreciate. Significant increases to ports, data transfer speeds, and even charging, this dock will maximize the value of your existing device.

The docking station features USB 3.0 ports, Display Ports, and even an extra audio slot for headphones or a mic. Three USB 3.0 ports will expand the real estate of chargers, printers, cameras, or any other connectable device and it does so with 5Gbps Superspeed. Additionally, a battery charging port enables up to 1.5A of power throughput for rapid charging.

Possibly the most impactful feature of the docking station is giving the user access to a multi-monitor setup from tablets, laptops, or other devices which would not have the functionality otherwise. The station delivers up to 3840 x 2160 @ 30Hz through the Display Port or 2560 x 1140 @ 50Hz through HDMI.

Feature List:

- DisplayPort output
- Powered by the DisplayLink DL-5900 USB video processor
- HDMI output
- Gigabit Ethernet (RJ45) port
- Three USB 3.0 ports
- 3.5mm audio/microphone port

For more information, feel free to visit their site at <http://www.accelcables.com> and if you need help filling those extra USB ports, [Nexcopy](#) can help.
