Accell's PowerGenius Rotating Surge Protector with Dual USB Charging Accommodates Adapters of All Sizes

If you're tired of bulky power adapters taking up 2 or 3 spots on your power strips thus making the strip practically useless, you'll love Accell's PowerGenius Rotating Surge Protector. It includes **six power outlets** and **two USB charging ports** for added convenience.

Most power strips have outlets that stay in one position. However, this one goes a step further and allows you to **rotate each outlet all the way to the left or right** so that you can make use of each and every outlet! Meaning, you'll be able to plug in a large, bulky power adapters without worry about them covering up an outlet and making it unusable.

[My duty to you:](#) This company was nice enough to send me this product to try and review for free or at a really steep discount. Don't worry, I always keep it real - no sugar-coating. Oh, and just so you know, there may be affiliate and/or referral links in this post. Thanks for stopping by!

Of all the power strips and surge protectors we have in our home (we have around 6-7 in use), this one is my new favorite because it doesn't waste any space. I love that I can use each outlet, I can charge any USB device, and I can **hang it up on a wall** to get it out of the way (thanks to the holes on the back for hanging).

I also love that it has an **extra long cord** (6 inches) so that it can reach further than your average power strip. I don't have to keep it right next to the main outlet.

Each USB charging port **supports up to 2.4A (shared) of high-speed charging**. So, you can easily charge two smartphones or a smartphone and tablet at the same time if needed. The two ports are also surge protected, so you don't have to worry about frying your devices if a harmful power surge should happen.

Lastly, I want to share with you how the overall surge protection and noise reduction filter of this power strip works (via [Accell's website](#)):

The Accell **PowerGenius** features a **high surge absorption capacity of 1080 Joules for excellent power protection**. The PowerGenius will **stop damaging power surges from reaching your connected devices**.

PowerGenius AC power line **noise rejection technology isolates your audio and video equipment from power generated noise**. By using clean power, **your audio and video system will provide the best possible picture and sound quality**.

There are also **two LED indicators** at the top of the strip that illuminate to let you know that the strip is grounded and protected. So, you'll always know if there's an issue and can hopefully catch it in time.

I'm loving the convenience, functionality, and look of this power strip. It's also not a bad price considering all it has to offer! It's definitely not your average power strip; it's way better!
