 Tweet

The team at ACCELL are always coming out with useful adapters, whether it be a docking station, display port to DVi, USB-C hub etc, the list goes on, and they are often very early to market on gear we all want and need.

The USB-C to 3 USB-A 3.0 hub

(<http://www.accellcables.com/collections/adapters/products/usb-c-to-3-usb-a-3-0-hub>) is no exception. As laptop manufacture lower the number of available USB ports on computers, hubs are going to be needed more than ever. So look no further ACCELL has a new USB-C to USB-A hub. Testing here the device worked as advertised with three devices connected.

Here is the feature stack from the manufacture.

- USB 3.0 compliant, supports data transfer speeds up to 4.8Gbps
- USB-A output: 5V @ 900mA
- USB powered design, no external power necessary
- Power consumption: 5V @ 200mA
- Approximate length: 7.9in (200mm)

Priced at \$37.99 (<http://www.accellcables.com/collections/adapters/products/usb-c-to-3-usb-a-3-0-hub>) this unit is available to purchase today.

## About geeknews

Todd Cochrane is the Founder of Geek News Central and host of the Geek News Central Podcast. He is a Podcast Hall of Fame Inductee and was one of the very first podcasters in 2004. He wrote the first book on podcasting, and did many of the early Podcast Advertising deals in the podcasting space. He does two other podcasts in addition to Geek News Central. The New Media Show and Podcast Legends. View all posts by geeknews → (<http://geeknewscentral.com/author/geeknews/>)
