

BULK MATERIALS

PRODUCT NAME:

Screenings

Screenings are a pulverized byproduct of the stone-crushing process at quarries and rock yards. Once considered a waste product, screenings are the smaller crushed stone pieces and fines that pass through the screens meant to catch and collect larger sized pieces that make up other products like clean gravels or rip rap. The size of screenings are generally 3/8" down to dust, and are made up of whatever type of rock it is that is being crushed - most commonly limestone or granite.

PRODUCT USES:

- Setting Bed and Joint Filler for Pavers.
- Prevent Weed and Grass growth from sprouting up between Pavers.
- Good Leveling Agent and Finishing Layer on Hardscapes and Masonry Projects.

COVERAGE: (Approx. for 1 Ton)

240 sqft @ 1" depth
120 sqft @ 2" depth
80 sqft @ 3" depth
40 sqft @ 4" depth

MATERIAL: Most commonly Limestone or Granite, but not limited to them.
