INSTALLATION GUIDE

Thank you for purchasing a product from Works Components - Firstly, we recommended that you take the installation of this product to your local bike shop if you are not a confident home mechanic.

- 1 Remove current headset and crown race if applicable.
- 2 Inspect headtube for damage & measure to confirm correct size & insertion depth.
- 3 Find and mark the centre-point of the headtube by measuring, using a straight edge or string tied to seat post and pulled taught down length of bike.
- 4 Apply small coat of suitable grease (Ensure carbon friendly if required)
- 5 Headcups must be installed with correct orientation as can be seen in figure 1.3
- 6 Upper cup Identify engraved arrow and install as shown in figure 1.2 with arrow facing front of bike to slacken head angle.
- 7. Lower Cup bearing is offset from centre, install with offset towards front of bike to slacken angle, offset towards rear of bike to steepen angle.
- 8 Ensure cups are pushed fully home into headtube with no visible gaps.
- 9 Apply grease to face of bearings, compression ring & crown race, install crown race to steerer tube and insert fork and install remaining components as shown in figure 1.1
- 10 Pre-load headset to remove bearing play tighten stem to manufacturer specification, handlebar should turn freely with no restriction.
