Sensory Calmness

Create visual and auditory calmness in any room by watching and listening to the movement of tiny bubbles with our modern sensory bubble Lamp.

Sensory Bubble Lamp-Apple/Heart/ Wall LED / Tube Lamps

Research between lighting and autism has brought to the public's attention numerous positive associations between lighting and colour and mood. Certain colours, such as blue, can help towards creativity and calmness, with mood lighting adding to a happy, creative environment.

www.disabilityequipmentonline.com.au

Reducing the exposure of harsh lighting and replacing with soothing relaxing lighting can help produce melatonin, the essential hormone needed for a good night's sleep.

Apple / Heart Lamps

Our bubble lamp has different colours and 15 different settings for how the colours are displayed (e.g., slow, fast, bright, dim, or no colour). Whether you feel like having a relaxing setting, or more upbeat setting, it is up to you!

Bubbles Are Fun!

The ability to control visual stimuli within the space can also be important to some individuals (e.g., light dimmers and remote controls for LED lamps). TIP! For further visual stimulation or relation add in plastic fish or other aquarium animals (like with our Aquarium lamps).

Neonatic Sensory Bubble Tubes

Product Information
