

COLLAGEN LIFT

COLLAGEN

Collagen is the most plentiful form of protein in your body, accounting for 30% of your body's protein. Collagen provides structure and strength to skin, muscles, bones, and tissues. As we age, collagen formation naturally declines, resulting in a loss of elasticity, strength, and tone throughout the body. Collagen has many benefits in the body, including healthy skin, joint and bone health, gut health, muscle growth and repair, and more.

ELASTIN

Elastin is another abundant protein in your body that accompanies collagen. Elastin contributes to the suppleness of the skin. It is what allows skin to recoil after being stretched and it gives elasticity and resilience to the skin and bones. When elastin content diminishes, we see a loss of structure and integrity in the skin accompanied by fragile, loose, and sagging skin. Unlike collagen, elastin is not easily replenished in the body and strategies to preserve and increase elastin are paramount to healthy aging.

WHO SHOULD TAKE COLLAGEN LIFT?

- Those wanting to reduce the appearance of wrinkles
- Post-menopausal women and those at risk for osteoporosis
- Individuals interested in natural anti-aging
- Individuals with joint pain
- Those with osteoarthritis or joint deterioration
- Those with digestive and gut disorders

COLLAGEN LIFT ADVANTAGES

The ratios of collagen and elastin in Collagen Lift mimic the ratios found in the skin. Collagen Lift is marine sourced, which allows for superior bioavailability and has been clinically shown to reduce the number of wrinkles in four weeks.

WHAT IS IT?

Collagen Lift is a formula of marine sourced hydrolyzed elastin and collagen. Elastin fibers create supple skin, while collagen fibers create skin strength that helps fight signs of aging. Collagen Lift improves skin health and reduces deep wrinkles. This unique formula with the addition of elastin mimics collagen and elastin ratios found in the skin.

WHAT IS IT USED FOR?

Collagen Lift provides the biomaterials for wound healing, skin health, anti-aging of skin, and bone regeneration. It increases the content of collagen and elastin in the body, which both play important roles in overall health and slowing down the aging process. Collagen Lift reduces wrinkles, fights the visual signs of aging, decreases pore size, and improves skin moisture.
